Ext Absolute-Value Functions

## ohapter

- Translate among different representations of linear functions.
- Find and interpret slopes and intercepts of linear equations that model real-world problems
- Solve real-world problems involving linear equations.
Take Flight
You can use linear functions to describe patterns and relationships in flight times.

## ARE YOU READY?

## (V) Vocabulary

Match each term on the left with a definition on the right.

1. coefficient
A. a change in the size or position of a figure
2. coordinate plane
B. forming right angles
3. transformation
4. perpendicular
C. a two-dimensional system formed by the intersection of a horizontal number line and a vertical number line
D. an ordered pair of numbers that gives the location of a point
E. a number that is multiplied by a variable

## $\checkmark$ Ordered Pairs

Graph each point on the same coordinate plane.
5. $A(2,5)$
6. $B(-1,-3)$
7. $C(-5,2)$
8. $D(4,-4)$
9. $E(-2,0)$
10. $F(0,3)$
11. $G(8,7)$
12. $H(-8,-7)$

## Solve for a Variable

Solve each equation for the indicated variable.
13. $2 x+y=8 ; y$
14. $5 y=5 x-10 ; y$
15. $2 y=6 x-8 ; y$
16. $10 x+25=5 y ; y$

## (E) Evaluate Expressions

Evaluate each expression for the given value of the variable.
17. $4 g-3 ; g=-2$
18. $8 p-12 ; p=4$
19. $4 x+8 ; x=-2$
20. $-5 t-15 ; t=1$

## Connect Words and Algebra

21. The value of a stock begins at $\$ 0.05$ and increases by $\$ 0.01$ each month. Write an equation representing the value of the stock $\nu$ in any month $m$.
22. Write a situation that could be modeled by the equation $b=100-s$.

## $\bigcirc$ Rates and Unit Rates

Find each unit rate.
23. 322 miles on 14 gallons of gas
24. $\$ 14.25$ for 3 pounds of deli meat
25. 32 grams of fat in 4 servings
26. 120 pictures on 5 rolls of film

## Where You've Been

## Previously, you

- wrote equations in function notation.
- graphed functions.
- identified the domain and range of functions.
- identified independent and dependent variables.

## In This Chapter

## You will study

- writing and graphing linear functions.
- identifying and interpreting the components of linear graphs, including the $x$-intercept, $y$-intercept, and slope.
- graphing and analyzing families of functions.

## Where You're Going

## You can use the skills in this chapter

- to solve systems of linear equations in Chapter 6.
- to identify rates of change in linear data in biology and economics.
- to make calculations and comparisons in your personal finances.

Key
Vocabullary/Vocabulario

| constant of variation | constante de variación |
| :--- | :--- |
| direct variation | variación directa |
| family of functions | familia de funciones |
| linear function | función lineal |
| parallel lines | líneas paralelas |
| perpendicular lines | líneas perpendiculares |
| slope | pendiente |
| transformation | transformación |
| $x$-intercept | intersección con el eje $x$ |
| $y$-intercept | intersección con el eje $y$ |

## Vocabulary Connections

To become familiar with some of the vocabulary terms in the chapter, consider the following. You may refer to the chapter, the glossary, or a dictionary if you like.

1. What shape do you think is formed when a linear function is graphed on a coordinate plane?
2. The meaning of intercept is similar to the meaning of intersection. What do you think an $x$-intercept might be?
3. Slope is a word used in everyday life, as well as in mathematics. What is your understanding of the word slope?
4. A family is a group of related people. Use this concept to define family of functions.

## Study Strategy: Use Multiple Representations

Representing a math concept in more than one way can help you understand it more clearly. As you read the explanations and example problems in your text, note the use of tables, lists, graphs, diagrams, and symbols, as well as words to explain a concept.

## From Lesson 4-4:

In this example from Chapter 4, the given function is described using an equation, a table, ordered pairs, and a graph.

## Graphing Functions

## Graph each function.

A $2 x+1=y$

## Equation

Step 1 Choose several values of $x$ and Step 2 Plot enough points to see generate ordered pairs. Table a pattern.

| $x$ | $2 x+1=y$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |
| -3 | $2(-3)+1=-5$ | ( $-3,-5$ ) | Graph | , |  |
| -2 | $2(-2)+1=-3$ | $(-2,-3)$ |  |  |  |
| -1 | $2(-1)+1=-1$ | $(-1,-1)$ |  | - | $\xrightarrow{x}$ |
| 0 | $2(0)+1=1$ | $(0,1)$ |  | - 2 |  |
| 1 | $2(1)+1=3$ | $(1,3)$ |  |  |  |
| 2 | $2(2)+1=5$ | $(2,5)$ | Ordered Pairs |  |  |
| 3 | $2(3)+1=7$ | $(3,7)$ |  |  |  |

Step 3 The ordered pairs appear to form a line. Draw a line through all the points to show all the ordered pairs that satisfy the function. Draw arrowheads on both "ends" of the line.

## Hy This

1. If an employee earns $\$ 8.00$ an hour, $y=8 x$ gives the total pay $y$ the employee will earn for working $x$ hours. For this equation, make a table of ordered pairs and a graph. Explain the relationships between the equation, the table, and the graph. How does each one describe the situation?
2. What situations might make one representation more useful than another?

## 5-1 Identifying Linear Functions

## Objectives

Identify linear functions and linear equations.

Graph linear functions that represent real-world situations and give their domain and range.

## Vocabulary

linear function linear equation

## Why learn this?

Linear functions can describe many real-world situations, such as distances traveled at a constant speed.

Most people believe that there is no speed limit on the German autobahn. However, many stretches have a speed limit of $120 \mathrm{~km} / \mathrm{h}$. If a car travels continuously at this speed, $y=120 x$ gives the number of kilometers $y$ that the car would travel in $x$ hours. Solutions are shown in the graph.

The graph represents a function because each domain value ( $x$-value) is paired with exactly one range value ( $y$-value). Notice that the graph is a straight line. A function whose graph forms a straight line is called a linear function.

## E X A M P L E 1 Identifying a Linear Function by Its Graph

Identify whether each graph represents a function. Explain. If the graph does represent a function, is the function linear?

A

Each domain value is paired with exactly one range value. The graph forms a line. linear function

B

Each domain value is paired with exactly one range value. The graph is not a line.
not a linear function

C

The only domain value, 3, is paired with many different range values. not a function

Identify whether each graph represents a function. Explain. If the graph does represent a function, is the function linear?
1 1a.

1b.

1c.

## Caution!

If you find a constant change in the $y$-values, check for a constant change in the $x$-values. Both need to be constant for the function to be linear.

You can sometimes identify a linear function by looking at a table or a list of ordered pairs. In a linear function, a constant change in $x$ corresponds to a constant change in $y$.

In this table, a constant change of +1 in $x$ corresponds to a constant change of -3 in $y$. These points satisfy a linear function.

The points from this table lie on a line.

In this table, a constant change of +1 in $x$ does not correspond to a constant change in $y$. These points do not satisfy a linear function.

The points from this table do not lie on a line.

EXAMPLE

Identifying a Linear Function by Using Ordered Pairs
Tell whether each set of ordered pairs satisfies a linear function. Explain.
A $\{(2,4),(5,3),(8,2),(11,1)\}$

B $\{(-10,10),(-5,4),(0,2),(5,0)\}$

Write the ordered pairs in a table. Look for a pattern.
A constant change of +3 in $x$ corresponds to a constant change of -1 in $y$.
These points satisfy a linear function.

Write the ordered pairs in a table. Look for a pattern.
A constant change of +5 in $x$ corresponds to different changes in $y$.
These points do not satisfy a linear function.
2. Tell whether the set of ordered pairs $\{(3,5),(5,4),(7,3),(9,2)$, $(11,1)\}$ satisfies a linear function. Explain.

Another way to determine whether a function is linear is to look at its equation. A function is linear if it is described by a linear equation. A linear equation is any equation that can be written in the standard form shown below.

Standard Form of a Linear Equation
$A x+B y=C$ where $A, B$, and $C$ are real numbers and $A$ and $B$ are not both 0

Notice that when a linear equation is written in standard form

- $x$ and $y$ both have exponents of 1 .
- $x$ and $y$ are not multiplied together.
- $x$ and $y$ do not appear in denominators, exponents, or radical signs.

|  | Linear | Not Linear |  |
| :--- | :--- | :--- | :--- |
| $3 x+2 y=10$ | Standard form | $3 x y+x=1$ | $x$ and $y$ are multiplied. |
| $y-2=3 x$ | Can be written as | $x^{3}+y=-1$ | $x$ has an exponent |
| other than 1. |  |  |  |
| $-y=5 x$ | Can be written as <br> $5 x+y=0$ | $x+\frac{6}{y}=12$ | $y$ is in a denominator. |

For any two points, there is exactly one line that contains them both. This means you need only two ordered pairs to graph a line.

## E X A MPLE 3 Graphing Linear Functions

Tell whether each function is linear. If so, graph the function.

## Remember!

- $y-x=y+(-x)$
- $y+(-x)=-x+y$
- $-x=-1 x$
- $y=1 y$

```
\(y=x+3\)
    \(y=x+3\) Write the equation in standard form.
    \(y \frac{-x}{3}=\frac{-x}{3} \quad\) Subtraction Property of Equality
    \(-x+y=3\) The equation is in standard form \((A=-1, B=1, C=3)\).
```

The equation can be written in standard form, so the function is linear.

To graph, choose three values of $x$, and use them to generate ordered pairs.
(You only need two, but graphing three points is a good check.)

| $x$ | $y=x+3$ | $(x, y)$ |
| :---: | :---: | :---: |
| 0 | $y=0+3=3$ | $(0,3)$ |
| 1 | $y=1+3=4$ | $(1,4)$ |
| 2 | $y=2+3=5$ | $(2,5)$ |

B $y=x^{2}$
This is not linear, because $x$ has an exponent other than 1 .

Tell whether each function is linear. If so, graph the function.
3a. $y=5 x-9$
3b. $y=12$
3c. $y=2^{x}$

For linear functions whose graphs are not horizontal, the domain and range are all real numbers. However, in many real-world situations, the domain and range must be restricted. For example, some quantities cannot be negative, such as time.

Sometimes domain and range are restricted even further to a set of points. For example, a quantity such as number of people can only be whole numbers. When this happens, the graph is not actually connected because every point on the line is not a solution. However, you may see these graphs shown connected to indicate that the linear pattern, or trend, continues.

## EXAMPLE 4 Career Application

Sue rents a manicure station in a salon and pays the salon owner \$5.50 for each manicure she gives. The amount Sue pays each day is given by $f(x)=5.50 x$, where $x$ is the number of manicures. Graph this function and give its domain and range.
Choose several values of $x$ and make a table of ordered pairs.

Graph the ordered pairs.

| $\boldsymbol{x}$ | $\boldsymbol{f}(\boldsymbol{x})=5.50 \boldsymbol{x}$ |
| :---: | :--- |
| 0 | $f(0)=5.50(0)=0$ |
| 1 | $f(1)=5.50(1)=5.50$ |
| 2 | $f(2)=5.50(2)=11.00$ |
| 3 | $f(3)=5.50(3)=16.50$ |
| 4 | $f(4)=5.50(4)=22.00$ |
| 5 | $f(5)=5.50(5)=27.50$ |

The number of manicures must be a whole number, so the domain is $\{0,1,2,3, \ldots\}$. The range is $\{0,5.50,11.00$,
 $16.50, \ldots\}$.
4. What if...? At another salon, Sue can rent a station for $\$ 10.00$ per day plus $\$ 3.00$ per manicure. The amount she would pay each day is given by $f(x)=3 x+10$, where $x$ is the number of manicures. Graph this function and give its domain and range.

## THINK AND DISCUSS

1. Suppose you are given five ordered pairs that satisfy a function. When you graph them, four lie on a straight line, but the fifth does not. Is the function linear? Why or why not?
2. In Example 4, why is every point on the line not a solution?
3. GET ORGANIZED Copy and complete the graphic organizer. In each box, describe how to use the information to identify a linear function. Include an example.

Determining Whether a Function Is Linear

## GUIDED PRACTICE

1. Vocabulary Is the linear equation $3 x-2=y$ in standard form? Explain.

SEE EXAMPLE 1
p. 300

SEE EXAMPLE 2
p. 301

SEE EXAMPLE 3
p. 302 $\square$
13. Transportation A train travels at a constant speed of $75 \mathrm{mi} / \mathrm{h}$. The function $f(x)=75 x$ gives the distance that the train travels in $x$ hours. Graph this function and give its domain and range.
14. Entertainment A movie rental store charges a $\$ 6.00$ membership fee plus $\$ 2.50$ for each movie rented. The function $f(x)=2.50 x+6$ gives the cost of renting $x$ movies. Graph this function and give its domain and range.
Tell whether the given ordered pairs satisfy a linear function. Explain.
5.

| $x$ | 5 | 4 | 3 | 2 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $y$ | 0 | 2 | 4 | 6 | 8 |

6. 

| $x$ | 1 | 4 | 9 | 16 | 25 |

## Extra Practice

Skills Practice p. $\mathbf{S 1 2}$
Application Practice p. S32

Identify whether each graph represents a function. Explain. If the graph does represent a function, is the function linear?
2.

3.

4.

Tell whether each function is linear. If so, graph the function.
21. $y=5$
22. $4 y-2 x=0$
23. $\frac{3}{x}+4 y=10$
24. $5+3 y=8$
25. Transportation The gas tank in Tony's car holds 15 gallons, and the car can travel 25 miles for each gallon of gas. When Tony begins with a full tank of gas, the function $f(x)=-\frac{1}{25} x+15$ gives the amount of gas $f(x)$ that will be left in the tank after traveling $x$ miles (if he does not buy more gas). Graph this function and give its domain and range.

Tell whether the given ordered pairs satisfy a function. If so, is it a linear function?
26. $\{(2,5),(2,4),(2,3),(2,2),(2,1)\}$
27. $\{(-8,2),(-6,0),(-4,-2),(-2,-4),(0,-6)\}$
28.

| $x$ | -10 | -6 | -2 | 2 | 4 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $y$ | 0 | 0.25 | 0.50 | 0.75 | 1 |

29. 

| $x$ | -5 | -1 | 3 | 7 | 11 |
| :---: | ---: | ---: | ---: | ---: | ---: |
| $y$ | 1 | 1 | 1 | 1 | 1 |

Tell whether each equation is linear. If so, write the equation in standard form and give the values of $A, B$, and $C$.
30. $2 x-8 y=16$
31. $y=4 x+2$
32. $2 x=\frac{y}{3}-4$
33. $\frac{4}{x}=y$
34. $\frac{x+4}{2}=\frac{y-4}{3}$
35. $x=7$
36. $x y=6$
37. $3 x-5+y=2 y-4$
38. $y=-x+2$
39. $5 x=2 y-3$
40. $2 y=-6$
41. $y=\sqrt{x}$

## Graph each linear function.

42. $y=3 x+7$
43. $y=x+25$
44. $y=8-x$
45. $y=2 x$
46. $-2 y=-3 x+6$
47. $y-x=4$
48. $y-2 x=-3$
49. $x=5+y$
50. Measurement One inch is equal to approximately 2.5 centimeters. Let $x$ represent inches and $y$ represent centimeters. Write an equation in standard form relating $x$ and $y$. Give the values of $A, B$, and $C$.
51. Wages Molly earns $\$ 8.00$ an hour at her job.
a. Let $x$ represent the number of hours that Molly works. Write a function using $x$ and $f(x)$ that describes Molly's pay for working $x$ hours.
b. Graph this function and give its domain and range.
52. Write About It For $y=2 x-1$, make a table of ordered pairs and a graph. Describe the relationships between the equation, the table, and the graph.
53. Critical Thinking Describe a real-world situation that can be represented by a linear function whose domain and range must be limited. Give your function and its domain and range.
54. This problem will prepare you for the Multi-Step Test Prep on page 342.
a. Juan is running on a treadmill. The table shows the number of Calories Juan burns as a function of time. Explain how you can tell that this relationship is linear by using the table.
b. Create a graph of the data.
c. How can you tell from the graph that the relationship is linear?

| Time (min) | Calories |
| :---: | :---: |
| 3 | 27 |
| 6 | 54 |
| 9 | 81 |
| 12 | 108 |
| 15 | 135 |
| 18 | 162 |
| 21 | 189 |

55. Physical Science A ball was dropped from a height of 100 meters. Its height above the ground in meters at different times after its

| Time (s) | 0 | 1 | 2 | 3 |
| :--- | :---: | :---: | :---: | :---: |
| Height (m) | 100 | 90.2 | 60.8 | 11.8 | release is given in the table. Do these ordered pairs satisfy a linear function? Explain.

56. Critical Thinking Is the equation $x=9$ a linear equation? Does it describe a linear function? Explain.
57. Which is NOT a linear function?
(A) $y=8 x$
(B) $y=x+8$
(C) $y=\frac{8}{x}$
(D) $y=8-x$
58. The speed of sound in $0^{\circ} \mathrm{C}$ air is about 331 feet per second. Which function could be used to describe the distance in feet $d$ that sound will travel in air in $s$ seconds?
(F) $d=s+331$
(G) $d=331 s$
(H) $s=331 d$
(J) $s=331-d$
59. Extended Response Write your own linear function. Show that it is a linear function in at least three different ways. Explain any connections you see between your three methods.

## CHALLENGE AND EXTEND

60. What equation describes the $x$-axis? the $y$-axis? Do these equations represent linear functions?
$\square 1$ Geometry Copy and complete each table below. Then tell whether the table shows a linear relationship.
61. 

| Perimeter of a Square |  |
| :---: | :---: |
| Side Length | Perimeter |
| 1 |  |
| 2 |  |
| 3 |  |
| 4 |  |

## SPIRAL REVIEW

Simplify each expression. (Lesson 1-4)
64. $8^{2}$
65. $(-1)^{3}$
66. $(-4)^{4}$
67. $\left(\frac{1}{3}\right)^{2}$

Solve each equation. Check your answer. (Lesson 2-4)
68. $6 m+5=3 m-4$
69. $2(t-4)=3-(3 t+1)$
70. $9 y+5-2 y=2 y+5-y+3$

Find the value of $x$ in each diagram. (Lesson 2-8)
71. $\triangle A B C \sim \triangle D E F$
72. $A B C D \sim Q R S T$

## 5-2 Using Intercepts

## Objectives

Find $x$ - and $y$-intercepts and interpret their meanings in real-world situations.
Use $x$ - and $y$-intercepts to graph lines.

## Vocabulary

$y$-intercept $x$-intercept

## Who uses this?

Divers can use intercepts to determine the time a safe ascent will take.

A diver explored the ocean floor 120 feet below the surface and then ascended at a rate of 30 feet per minute. The graph shows the diver's elevation below sea level during the ascent.

The $y$-intercept is the $y$-coordinate of the point where the graph intersects the $y$-axis. The $x$-coordinate of this point is always 0 .

The $x$-intercept is the $x$-coordinate of the point where the graph intersects the $x$-axis. The $y$-coordinate of this point is always 0 .

The $x$-intercept is 4. It represents the time that the diver reaches the surface, or when depth $=0$.

The $y$-intercept is -120 . It represents the diver's elevation at the start of the ascent, when time $=0$.

## EXAMPLE

## Finding Intercepts

## Find the $x$ - and $y$-intercepts.

A

The graph intersects the $x$-axis at $(-4,0)$. The $x$-intercept is -4 .

The graph intersects the $y$-axis at $(0,-3)$. The $y$-intercept is -3 .

B $3 x-2 y=12$
To find the $x$-intercept, replace $y$ with 0 and solve for $x$.

$$
\begin{aligned}
3 x-2 y & =12 \\
3 x-2(0) & =12 \\
3 x-0 & =12 \\
3 x & =12 \\
\frac{3 x}{3} & =\frac{12}{3} \\
x & =4
\end{aligned}
$$

The $x$-intercept is 4 .

To find the $y$-intercept, replace $x$ with 0 and solve for $y$.

$$
\begin{aligned}
3 x-2 y & =12 \\
3(0)-2 y & =12 \\
0-2 y & =12 \\
-2 y & =12 \\
\frac{-2 y}{-2} & =\frac{12}{-2} \\
y & =-6
\end{aligned}
$$

The $y$-intercept is -6 .

Find the $x$ - and $y$-intercepts.

1b. $-3 x+5 y=30$
1c. $4 x+2 y=16$

1 a.

Madison Stewart Jefferson High School

I use the "cover-up" method to find intercepts. To use this method, make sure the equation is in standard form first.

If I have $4 x-3 y=12$ :

First, I cover $4 x$ with my finger and solve the equation I can still see.

$$
\begin{aligned}
m^{m} y-3 y & =12 \\
y & =-4
\end{aligned}
$$

The $y$-intercept is -4 .

Then I cover -3y with my finger and do the same thing.

$$
\begin{aligned}
& 4 x m^{m}=12 \\
& x=3
\end{aligned}
$$

The $x$-intercept is 3 .

## E X A MPLE 2 Travel Application

The Sandia Peak Tramway in Albuquerque, New Mexico, travels a distance of about 4500 meters to the top of Sandia Peak. Its speed is 300 meters per minute. The function $f(x)=4500-300 x$ gives the tram's distance in meters from the top of the peak after $x$ minutes. Graph this function and find the intercepts. What does each intercept represent?

Neither time nor distance can be negative, so choose several nonnegative values for $x$. Use the function to generate ordered pairs.

| $\boldsymbol{x}$ | 0 | 2 | 5 | 10 | 15 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| $\boldsymbol{f}(\boldsymbol{x})=\mathbf{4 5 0 0}-\mathbf{3 0 0 x}$ | 4500 | 3900 | 3000 | 1500 | 0 |

Graph the ordered pairs. Connect the points with a line.

## Caution!

The graph is not the path of the tram. Even though the line is descending, the graph describes the distance from the peak as the tram goes up the mountain.

- $y$-intercept: 4500 . This is the starting distance from the top (time $=0$ ).
- $x$-intercept: 15 . This the time when the tram reaches the peak (distance $=0)$.

2. The school store sells pens for $\$ 2.00$ and notebooks for $\$ 3.00$. The equation $2 x+3 y=60$ describes the number of pens $x$ and notebooks $y$ that you can buy for $\$ 60$.
a. Graph the function and find its intercepts.
b. What does each intercept represent?

Remember, to graph a linear function, you need to plot only two ordered pairs. It is often simplest to find the ordered pairs that contain the intercepts.

## E X A M P LE 3 Graphing Linear Equations by Using Intercepts

Use intercepts to graph the line described by each equation.

A
$2 x-4 y=8$
Step 1 Find the intercepts.

$$
\begin{array}{rlrl}
x \text {-intercept: } & y \text {-intercept: } \\
2 x-4 y & =8 & 2 x-4 y & =8 \\
2 x-4(0) & =8 & 2(0)-4 y & =8 \\
2 x & =8 & -4 y & =8 \\
\frac{2 x}{2} & =\frac{8}{2} & \frac{-4 y}{-4} & =\frac{8}{-4} \\
x & =4 & y & =-2
\end{array}
$$

Step 2 Graph the line.
Plot $(4,0)$ and ( $0,-2$ ).
Connect with a straight line.

You can use a third point to check your line. Either choose a point from your graph and check it in the equation, or use the equation to generate a point and check that it is on your graph. point to check your

## Helpful Hint

## GUIDED PRACTICE

1. Vocabulary The $\qquad$ ? is the $y$-coordinate of the point where a graph crosses the $y$-axis. ( $x$-intercept or $y$-intercept )

SEE EXAMPLE 1 Find the $x$ - and $y$-intercepts.
p. 307

22. Environmental Science A fishing lake was stocked with 300 bass. Each year, the population decreases by 25 . The population of bass in the lake after $x$ years is represented by the function $f(x)=300-25 x$.
a. Graph the function and find its intercepts.
b. What does each intercept represent?
23. Sports Julie is running a 5 -kilometer race. She runs 1 kilometer every 5 minutes. Julie's distance from the finish line after $x$ minutes is represented by the function $f(x)=5-\frac{1}{5} x$.
a. Graph the function and find its intercepts.
b. What does each intercept represent?

Use intercepts to graph the line described by each equation.

Bamboo is the world's fastest-growing woody plant. Some varieties can grow more than 30 centimeters a day and up to 40 meters tall.
24. $4 x-6 y=12$
25. $2 x+3 y=18$
26. $\frac{1}{2} x-4 y=4$
27. $y-x=-1$
28. $5 x+3 y=15$
29. $x-3 y=-1$

Biology A bamboo plant is growing 1 foot per day. When you first measure it, it is 4 feet tall.
a. Write an equation to describe the height $y$, in feet, of the bamboo plant $x$ days after you measure it.
b. What is the $y$-intercept?
c. What is the meaning of the $y$-intercept in this problem?
31. Estimation Look at the scatter plot and trend line.
a. Estimate the $x$ - and $y$-intercepts.
b. What is the real-world meaning of each intercept?
32. Personal Finance A bank employee notices an abandoned checking account with a balance of $\$ 412$. If the bank charges a $\$ 4$ monthly fee for the account, the function $b=412-4 m$ shows the balance $b$ in the account after $m$ months.

a. Graph the function and give its domain and range. (Hint: The bank will keep charging the monthly fee even after the account is empty.)
b. Find the intercepts. What does each intercept represent?
c. When will the bank account balance be 0 ?
33. Critical Thinking Complete the following to learn about intercepts and horizontal and vertical lines.
a. Graph $x=-6, x=1$, and $x=5$. Find the intercepts.
b. Graph $y=-3, y=2$, and $y=7$. Find the intercepts.
c. Write a rule describing the intercepts of linear equations whose graphs are horizontal and vertical lines.

Match each equation with a graph.
34. $-2 x-y=4$
35. $y=4-2 x$
36. $2 y+4 x=8$
37. $4 x-2 y=8$

Connecting

## Geometry

# Area in the Coordinate Plane 

Lines in the coordinate plane can form the sides of polygons. You can use points on these lines to help you find the areas of these polygons.

## Zxample

Find the area of the triangle formed by the $x$-axis, the $y$-axis, and the line described by $3 x+2 y=18$.

Step 1 Find the intercepts of $3 x+2 y=18$.
$x$-intercept: $\quad y$-intercept:

$$
\begin{array}{rlrl}
3 x+2 y & =18 & 3 x+2 y & =18 \\
3 x+2(0) & =18 & 3(0)+2 y & =18 \\
3 x & =18 & 2 y & =18 \\
x & =6 & y & =9
\end{array}
$$

Step 2 Use the intercepts to graph the line. The $x$-intercept is 6 , so plot $(6,0)$. The $y$-intercept is 9 , so plot $(0,9)$. Connect with a straight line. Then shade the triangle formed by the line and the axes, as described.

Step 3 Recall that the area of a triangle is given by $A=\frac{1}{2} b h$.

- The length of the base is 6 .
- The height is 9 .

Step 4 Substitute these values into the formula.

$$
\begin{aligned}
A & =\frac{1}{2} b h \\
A & =\frac{1}{2}(6)(9) \quad \text { Substitute into the area formula. } \\
& =\frac{1}{2}(54) \\
& =27
\end{aligned} \quad \text { Simplify. }
$$

The area of the triangle is 27 square units.

## Iry This

1. Find the area of the triangle formed by the $x$-axis, the $y$-axis, and the line described by $3 x+2 y=12$.
2. Find the area of the triangle formed by the $x$-axis, the $y$-axis, and the line described by $y=6-x$.
3. Find the area of the polygon formed by the $x$-axis, the $y$-axis, the line described by $y=6$, and the line described by $x=4$.

## Objectives

Find rates of change and slopes.
Relate a constant rate of change to the slope of a line.

## Vocabulary

rate of change
rise
run
slope

## Rate of Change and Slope

## Why learn this?

Rates of change can be used to find how quickly costs have increased.

In 1985, the cost of sending a 1-ounce letter was 22 cents. In 1988, the cost was 25 cents. How fast did the cost change from 1985 to 1988 ? In other words, at what rate did the cost change?

A rate of change is a ratio that compares the amount of change in a dependent variable to the amount of change in an independent variable.

rate of change $=\frac{\text { change in dependent variable }}{\text { change in independent variable }}$

## EXAMPLE 1 Consumer Application

The table shows the cost of mailing a 1-ounce letter in different years. Find the rate of change in cost for each time interval. During which time interval did the cost increase at the greatest rate?

| Year | 1988 | 1990 | 1991 | 2004 | 2008 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Cost (\&) | 25 | 25 | 29 | 37 | 42 |

Step 1 Identify the dependent and independent variables.
dependent: cost independent: year
Step 2 Find the rates of change.

$$
\begin{aligned}
& 1988 \text { to } 1990 \frac{\text { change in cost }}{\text { change in years }}=\frac{25-25}{1990-1988}=\frac{0}{2}=0 \quad \frac{0 \text { cents }}{\text { year }} \\
& 1990 \text { to } 1991 \frac{\text { change in cost }}{\text { change in years }}=\frac{29-25}{1991-1990}=\frac{4}{1}=4 \quad \frac{4 \text { cents }}{\text { year }} \\
& 1991 \text { to } 2004 \frac{\text { change in cost }}{\text { change in years }}=\frac{37-29}{2004-1991}=\frac{8}{13} \approx 0.62 \approx \frac{0.62 \text { cents }}{\text { year }} \\
& 2004 \text { to } 2008 \frac{\text { change in cost }}{\text { change in years }}=\frac{42-37}{2008-2004}=\frac{5}{4}=1.25 \quad \frac{1.25 \text { cents }}{\text { year }}
\end{aligned}
$$

The cost increased at the greatest rate from 1990 to 1991.

1. The table shows the balance of a bank account on different days of the month. Find the rate of change for each time interval. During which time interval did the balance decrease at the greatest rate?

| Day | 1 | 6 | 16 | 22 | 30 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Balance (\$) | 550 | 285 | 210 | 210 | 175 |

## EXAMPLE 2 Finding Rates of Change from a Graph

 Graph the data from Example 1 and show the rates of change.

Graph the ordered pairs. The vertical blue segments show the changes in the dependent variable, and the horizontal green segments show the changes in the independent variable.
Notice that the greatest rate of change is represented by the steepest of the red line segments.
Also notice that between 1988 and 1990, when the cost did not change, the red line segment is horizontal.
2. Graph the data from Check It Out Problem 1 and show the rates of change.

If all of the connected segments have the same rate of change, then they all have the same steepness and together form a straight line. The constant rate of change of a nonvertical line is called the slope of the line.

## Slope of a Line

The rise is the difference in the $y$-values of two points on a line.
The run is the difference in the $x$-values of two points on a line.
The slope of a line is the ratio of rise to run for any two points on the line.

$$
\text { slope }=\frac{\text { rise }}{\text { run }}=\frac{\text { change in } y}{\text { change in } x}
$$

(Remember that $y$ is the dependent variable and $x$ is the independent variable.)

## EXAMPLE 3 Finding Slope

 Find the slope of the line.
## Caution! IIIII,

Pay attention to the scales on the axes. One square on the grid may not represent 1 unit. In Example 3, each square represents $\frac{1}{2}$ unit.

Begin at one point and count vertically to find the rise. Then count horizontally to the second point to find the run.
It does not matter which point you start with. The slope is the same.

$$
\begin{aligned}
& \text { slope }=\frac{2}{1}=2 \\
& \text { slope }=\frac{-2}{-1}=2
\end{aligned}
$$

Find the slope of each line.
A

$\frac{\text { rise }}{\text { run }}=\frac{0}{4}=0$
The slope is 0 .
B

$\frac{\text { rise }}{\text { run }}=\frac{2}{0}$
You cannot
divide by 0.
The slope is undefined.

Find the slope of each line.
4a.

4b.

As shown in the previous examples, slope can be positive, negative, zero, or undefined. You can tell which of these is the case by looking at the graph of a line-you do not need to calculate the slope.
Know it K

## EXAMPLE 5 Describing Slope

Tell whether the slope of each line is positive, negative, zero, or undefined.

The line falls from left to right.
The slope is negative.

B

The line is horizontal.
The slope is 0 .

Tell whether the slope of each line is positive, negative, zero, or undefined.
$5 a$.

5 b.

A line's slope is a measure of its steepness. Some lines are steeper than others. As the absolute value of the slope increases, the line becomes steeper. As the absolute value of the slope decreases, the line becomes less steep.

| Comparing Slopes |  |  |
| :---: | :---: | :---: |
|  |  |  |
| The line with slope 4 is steeper than the line with slope $\frac{1}{2}$. $\|4\|>\left\|\frac{1}{2}\right\|$ | The line with slope -2 is steeper than the line with slope $\mathbf{- 1}$. $\|-2\|>\|-1\|$ | The line with slope -3 is steeper than the line with slope $\frac{3}{4}$. $\|-3\|>\left\|\frac{3}{4}\right\|$ |

## THINK AND DISCUSS

1. What is the rise shown in the graph? What is the run? What is the slope?
2. The rate of change of the profits of a company over one year is negative. How have the profits of the company changed over that year?
3. Would you rather climb a hill with a slope of 4 or a hill with a slope of $\frac{5}{2}$ ? Explain your
 answer.
4. GET ORGANIZED Copy and complete the graphic organizer. In each box, sketch a line whose slope matches the given description.

## GUIDED PRACTICE

Application Practice p. S32
12. The table shows the length of a baby at different ages. Find the rate of change for each time interval. Round your answers to the nearest tenth. During which time interval did the baby have the greatest growth rate?

| Age (mo) | 3 | 9 | 18 | 26 | 33 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Length (in.) | 23.5 | 27.5 | 31.6 | 34.5 | 36.7 |

13. The table shows the distance of an elevator from the ground floor at different times. Graph the data and show the rates of change.

| Time (s) | 0 | 15 | 23 | 30 | 35 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Distance (m) | 30 | 70 | 0 | 45 | 60 |

Find the slope of each line.
14.

15.

16.

17.

Tell whether the slope of each line is positive, negative, zero, or undefined.

The Incline Railway's climb up Lookout Mountain has been called "America's Most Amazing Mile." A round-trip on the railway lasts about 1.5 hours.
18.

19.

Travel The Lookout Mountain Incline Railway in Chattanooga, Tennessee, is the steepest passenger railway in the world. A section of the railway has a slope of about 0.73. In this section, a vertical change of 1 unit corresponds to a horizontal change of what length? Round your answer to the nearest hundredth.
21. Critical Thinking In Lesson 5-1, you learned that in a linear function, a constant change in $x$ corresponds to a constant change in $y$. How is this related to slope?
22. This problem will prepare you for the Multi-Step Test Prep on page 342.
a. The graph shows a relationship between a person's age and his or her estimated maximum heart rate in beats per minute. Find the slope.
b. Describe the rate of change in this situation.

Estimated Maximum Heart Rate

23. Construction Most staircases in use today have 9 -inch treads and $8 \frac{1}{2}$-inch risers. What is the slope of a staircase with these measurements?
24. A ladder is leaned against a building. The bottom of the ladder is 9 feet from the building. The top of the ladder is 16 feet above the ground.
a. Draw a diagram to represent this situation.
b. What is the slope of the ladder?
25. Write About It Why will the slope of any horizontal line be 0 ? Why will the slope of any vertical line be undefined?
26. The table shows the distance traveled by a car during a five-hour road trip.

| Time (h) | 0 | 1 | 2 | 3 | 4 | 5 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Distance (mi) | 0 | 40 | 80 | 80 | 110 | 160 |

a. Graph the data and show the rates of change.
b. The rate of change represents the average speed. During which hour was the car's average speed the greatest?
27. Estimation The graph shows the number of files scanned by a computer virus detection program over time.
a. Estimate the coordinates of point $A$.
b. Estimate the coordinates of point $B$.
c. Use your answers from parts $\mathbf{a}$ and $\mathbf{b}$ to estimate the rate of change (in files per second) between points $A$ and $B$.
28. Data Collection Use a graphing calculator and a motion detector for the following. Set the
 equipment so that the graph shows distance on the $y$-axis and time on the $x$-axis.
a. Experiment with walking in front of the motion detector. How must you walk to graph a straight line? Explain.
b. Describe what you must do differently to graph a line with a positive slope vs. a line with a negative slope.
c. How can you graph a line with slope 0 ? Explain.
29. The slope of which line has the greatest absolute value?
(A) line $A$
(C) line $C$
(B) line $B$
(D) line $D$
30. For which line is the run equal to 0 ?
(A) line $A$
(C) line $C$
(B) line $B$
(D) line $D$

31. Which line has a slope of 4 ?
(F)

(H)

(G)

## Explore Constant Changes

There are many real-life situations in which the amount of change is constant. In these activities, you will explore what happens when

- a quantity increases by a constant amount.
- a quantity decreases by a constant amount.

## Activity 1

Janice has read 7 books for her summer reading club. She plans to read 2 books each week for the rest of the summer. The table shows the total number of books that Janice will have read after different numbers of weeks have passed.
(1) What number is added to the number of books in each row to get the number of books in the next row?
(2) What does your answer to Problem 1 represent in Janice's situation? Describe the meaning of the constant change.
(3) Graph the ordered pairs from the table. Describe how the points are related.
(4) Look again at your answer to Problem 1. Explain

| Janice's Summer Reading |  |
| :---: | :---: |
| Week | Total Books Read |
| 0 | 7 |
| 1 | 9 |
| 2 | 11 |
| 3 | 13 |
| 4 | 15 |
| 5 | 17 | how this number affects your graph.

## Try This

At a particular college, a full-time student must take at least 12 credit hours per semester and may take up to 18 credit hours per semester. Tuition costs $\$ 200$ per credit hour.

1. Copy and complete the table by using the information above.
2. What number is added to the cost in each row to get the cost in the next row?
3. What does your answer to Problem 2 above represent in the situation? Describe the meaning of the constant change.
4. Graph the ordered pairs from the table. Describe how the points are related.
5. Look again at your answer to Problem 2. Explain how this number affects your graph.
6. Compare your graphs from Activity 1 and Problem 4. How are they alike? How are they different?

| Tuition Costs |  |
| :---: | :---: |
| Credit Hours | Cost (\$) |
| 12 |  |
| 13 |  |
| 14 |  |
| 15 |  |
| 16 |  |
| 17 |  |
| 18 |  |

7. Make a Conjecture Describe the graph of any situation that involves repeated addition of a positive number. Why do you think your description is correct?

## Activity 2

An airplane is 3000 miles from its destination. The plane is traveling at a rate of 540 miles per hour. The table shows how far the plane is from its destination after various amounts of time have passed.
(1) What number is subtracted from the distance in each row to get the distance in the next row?
(2) What does your answer to Problem 1 represent in the situation? Describe the meaning of the constant change.
(3) Graph the ordered pairs from the table. Describe how the points are related.

| Airplane's Distance |  |
| :---: | :---: |
| Time (h) | Distance to Destination (mi) |
| 0 | 3000 |
| 1 | 2460 |
| 2 | 1920 |
| 3 | 1380 |
| 4 | 840 |

(4) Look again at your answer to Problem 1. Explain how this number affects your graph.

## Try This

A television game show begins with 20 contestants. Each week, the players vote 2 contestants off the show.
8. Copy and complete the table by using the information above.
9. What number is subtracted from the number of contestants in each row to get the number of contestants in the next row?
10. What does your answer to Problem 9 represent in the situation? Describe the meaning of the constant change.
11. Graph the ordered pairs from the table. Describe how the points are related.
12. Look again at your answer to Problem 9. Explain how this number affects your graph.
13. Compare your graphs from Activity 2 and Problem 11. How are they alike? How are they different?
14. Make a Conjecture Describe the graph of any situation that involves repeated subtraction of a positive number. Why do you think your description is correct?
15. Compare your two graphs from Activity 1 with your two graphs from Activity 2. How are they alike? How are they different?
16. Make a Conjecture How are graphs of situations involving repeated subtraction different from graphs of situations involving repeated addition? Explain your answer.

## Objective

Find slope by using the slope formula.

## Why learn this?

You can use the slope formula to find how quickly a quantity, such as the amount of water in a reservoir, is changing. (See Example 3.)

In Lesson 5-3, slope was described as the constant rate of change of a line. You saw how to find the slope of a line by using its graph.

There is also a formula you can use to find the slope of a line, which is usually represented by the letter $m$. To use this formula, you need the coordinates of two different points on the line.

## Slope Formula

| WORDS | FORMULA | EXAMPLE |
| :--- | :--- | :--- |
| The slope of a line is the <br> ratio of the difference in | If $\left(x_{1}, y_{1}\right)$ and $\left(x_{2}, y_{2}\right)$ are <br> any two different points <br> $y$-values to the difference <br> on a line, the slope of <br> in $x$-values between any <br> two different points on <br> the line. | two points on a line, the <br> the line is $m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}$. |
| slope of the line is |  |  |
| $m=\frac{4-(-3)}{1-2}=\frac{7}{-1}=-7$. |  |  |

## E X A M P LE 1 Finding Slope by Using the Slope Formula

Find the slope of the line that contains $(4,-2)$ and $(-1,2)$.

$$
\begin{array}{rlrl}
m & =\frac{y_{2}-y_{1}}{x_{2}-x_{1}} & & \text { Use the slope formula. } \\
& =\frac{2-(-2)}{-1-4} & \text { Substitute }(4,-2) \text { for }\left(x_{1}, y_{1}\right) \text { and }(-1,2) \text { for }\left(x_{2}, y_{2}\right) . \\
& =\frac{4}{-5} & & \text { Simplify. } \\
& =-\frac{4}{5} & &
\end{array}
$$

The slope of the line that contains $(4,-2)$ and $(-1,2)$ is $-\frac{4}{5}$.

1a. Find the slope of the line that contains $(-2,-2)$ and $(7,-2)$.
$\mathbf{1 b}$. Find the slope of the line that contains $(5,-7)$ and $(6,-4)$.
1c. Find the slope of the line that contains $\left(\frac{3}{4}, \frac{7}{5}\right)$ and $\left(\frac{1}{4}, \frac{2}{5}\right)$.

Sometimes you are not given two points to use in the formula. You might have to choose two points from a graph or a table.

## E X A M P LE 2 Finding Slope from Graphs and Tables

Each graph or table shows a linear relationship. Find the slope.
A

$$
\text { Let }(2,2) \text { be }\left(x_{1}, y_{1}\right) \text { and }(-2,-1) \text { be }\left(x_{2}, y_{2}\right) \text {. }
$$

$$
\begin{aligned}
m & =\frac{y_{2}-y_{1}}{x_{2}-x_{1}} & & \text { Use the slope formula. } \\
& =\frac{-1-2}{-2-2} & & \text { Substitute }(2,2) \text { for }\left(x_{1}, y_{1}\right) \text { and }(-2,-1) \text { for }\left(x_{2}, y_{2}\right) . \\
& =\frac{-3}{-4} & & \text { Simplify. } \\
& =\frac{3}{4} & &
\end{aligned}
$$

B

| $x$ | 2 | 2 | 2 | 2 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | 0 | 1 | 3 | 5 |

Step 1 Choose any two points from the table. Let $(2,0)$ be $\left(x_{1}, y_{1}\right)$ and $(2,3)$ be $\left(x_{2}, y_{2}\right)$.
Step 2 Use the slope formula.

$$
\begin{aligned}
m & =\frac{y_{2}-y_{1}}{x_{2}-x_{1}} & & \text { Use the slope formula. } \\
& =\frac{3-0}{2-2} & & \text { Substitute }(2,0) \text { for }\left(x_{1}, y_{1}\right) \text { and }(2,3) \text { for }\left(x_{2}, y_{2}\right) . \\
& =\frac{3}{0} & & \text { Simplify. }
\end{aligned}
$$

The slope is undefined.

Each graph or table shows a linear relationship. Find the slope.
2a.

2b.

2c.

| $x$ | 0 | 2 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | 1 | 5 | 11 | 13 |

2d.

| $x$ | -2 | 0 | 2 | 4 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | 3 | 0 | -3 | -6 |

Remember that slope is a rate of change. In real-world problems, finding the slope can give you information about how a quantity is changing.

The graph shows how much water is in a reservoir at different times. Find the slope of the line. Then tell what the slope represents.

Step 1 Use the slope formula.

$$
\begin{aligned}
m & =\frac{y_{2}-y_{1}}{x_{2}-x_{1}} \\
& =\frac{2000-3000}{60-20} \\
& =\frac{-1000}{40}=-25
\end{aligned}
$$

Step 2 Tell what the slope represents.
In this situation, $y$ represents volume of water and $x$ represents time.
So slope represents $\frac{\text { change in volume }}{\text { change in time }}$ in units of $\frac{\text { thousands of cubic feet }}{\text { hours }}$.
A slope of -25 means the amount of water in the reservoir is decreasing (negative change) at a rate of 25 thousand cubic feet each hour.
3. The graph shows the height of a plant over a period of days. Find the slope of the line. Then tell what the slope represents.

If you know the equation that describes a line, you can find its slope by using any two ordered-pair solutions. It is often easiest to use the ordered pairs that contain the intercepts.

## E X A M P LE 4 Finding Slope from an Equation

Find the slope of the line described by $6 x-5 y=30$.

Step 1 Find the $x$-intercept.

$$
\begin{aligned}
6 x-5 y & =30 \\
6 x-5(0) & =30 \quad \text { Let } y=0 . \\
6 x & =30 \\
\frac{6 x}{6} & =\frac{30}{6} \\
x & =5
\end{aligned}
$$

Step 2 Find the $y$-intercept.

$$
\begin{aligned}
6 x-5 y & =30 \\
6(0)-5 y & =30 \quad \text { Let } x=0 . \\
-5 y & =30 \\
\frac{-5 y}{-5} & =\frac{30}{-5} \\
y & =-6
\end{aligned}
$$

Step 3 The line contains $(5,0)$ and $(0,-6)$. Use the slope formula.

$$
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{-6-0}{0-5}=\frac{-6}{-5}=\frac{6}{5}
$$

4. Find the slope of the line described by $2 x+3 y=12$.

## THINK AND DISCUSS

1. The slope of a line is the difference of the $\qquad$ ? divided by the difference of the $\qquad$ for any two points on the line.
2. Two points lie on a line. When you substitute their coordinates into the slope formula, the value of the denominator is 0 . Describe this line.

3. GET ORGANIZED Copy and complete the graphic organizer. In each box, describe how to find slope using the given method.

## GUIDED PRACTICE

SEE EXAMPLE 1

a. Find the rates of change.
b. Is the graph of the data a line? If so, what is the slope? If not, explain why not.
23. Critical Thinking The graph shows the distance traveled by two cars.
a. Which car is going faster? How much faster?
b. How are the speeds related to slope?
c. At what rate is the distance between the cars changing?
24. Write About It You are given the coordinates of two points on a line. Describe two different ways to find the slope of that line.

Distance Traveled

MULTI-STEP TEST Prep
25. This problem will prepare you for the Multi-Step Test Prep on page 342.
a. One way to estimate your maximum heart rate is to subtract your age from 220. Write a function to describe the relationship between maximum heart rate $y$ and age $x$.
b. The graph of this function is a line. Find its slope. Then tell what the slope represents.
26. The equation $2 y+3 x=-6$ describes a line with what slope?
(A) $\frac{3}{2}$
(B) 0
(C) $\frac{1}{2}$
(D) $-\frac{3}{2}$
27. A line with slope $-\frac{1}{3}$ could pass through which of the following pairs of points?
(F) $\left(0,-\frac{1}{3}\right)$ and $(1,1)$
(H) $(0,0)$ and $\left(-\frac{1}{3},-\frac{1}{3}\right)$
(G) $(-6,5)$ and $(-3,4)$
(J) $(5,-6)$ and $(4,3)$
28. Gridded Response Find the slope of the line that contains $(-1,2)$ and $(5,5)$.

## CHALLENGE AND EXTEND

Find the slope of the line that contains each pair of points.
29. $(a, 0)$ and $(0, b)$
30. $(2 x, y)$ and $(x, 3 y)$
31. $(x, y)$ and $(x+2,3-y)$

Find the value of $x$ so that the points lie on a line with the given slope.
32. $(x, 2)$ and $(-5,8), m=-1$
33. $(4, x)$ and $(6,3 x), m=\frac{1}{2}$
34. $(1,-3)$ and $(3, x), m=-1$
35. $(-10,-4)$ and $(x, x), m=\frac{1}{7}$
36. A line contains the point $(1,2)$ and has a slope of $\frac{1}{2}$. Use the slope formula to find another point on this line.
37. The points $(-2,4),(0,2)$, and $(3, x-1)$ all lie on the same line. What is the value of $x$ ? (Hint: Remember that the slope of a line is constant for any two points on the line.)

## SPIRAL REVIEW

Solve each inequality and graph the solutions. (Lesson 3-7)
38. $|x|+5<16$
39. $|x+8|<3$
40. $3|x| \leq 12$
41. $|x|-11 \geq-4$
42. $|x-6|>10$
43. $|x+1| \geq 7$

Tell whether the given ordered pairs satisfy a linear function. (Lesson 5-1)
44. $\{(1,1),(2,4),(3,9),(4,16)\}$
45. $\{(9,0),(8,-5),(5,-20),(3,-30)\}$

Use the intercepts to graph the line described by each equation. (Lesson 5-2)
46. $x-y=5$
47. $3 x+y=9$
48. $y=5 x+10$

## 5-5 <br> The Midpoint and Distance Formulas

## Objectives

Apply the formula for midpoint.
Use the Distance Formula to find the distance between two points.

## Vocabulary

midpoint

## Why learn this?

You can use the coordinate plane to model and solve problems involving distances, such as the distance across a lake. (See Example 4.)

In Lesson 5-4, you used the coordinates of points to determine the slope of lines. You can also use coordinates to determine the midpoint of a line segment on the coordinate plane.

The midpoint of a line segment is the point that divides the segment into two congruent segments. Congruent segments
 are segments that have the same length.

You can find the midpoint of a segment by using the coordinates of its endpoints. Calculate the average of the $x$-coordinates and the average of the $y$-coordinates of the endpoints.

## Midpoint Formula

The midpoint $M$ of $\overline{A B}$ with endpoints $A\left(x_{1}, y_{1}\right)$ and $B\left(x_{2}, y_{2}\right)$ is

$$
M\left(\frac{x_{1}+x_{2}}{2}, \frac{y_{1}+y_{2}}{2}\right)
$$

## EXAMPLE 1 Finding the Coordinates of a Midpoint

## Remember!

A segment is named by its endpoints. The notation $\overline{C D}$ is read "segment $C D$."

Find the coordinates of the midpoint of $\overline{C D}$ with endpoints $C(-2,-1)$ and $D(4,2)$.
$M\left(\frac{x_{1}+x_{2}}{2}, \frac{y_{1}+y_{2}}{2}\right)$
Write the formula.
$M\left(\frac{-2+4}{2}, \frac{-1+2}{2}\right) \quad$ Substitute.
$M\left(\frac{2}{2}, \frac{1}{2}\right)=M\left(1, \frac{1}{2}\right) \quad$ Simplify.

IT OUT:

1. Find the coordinates of the midpoint of $\overline{E F}$ with endpoints $E(-2,3)$ and $F(5,-3)$.

## E X A MPLE 2 Finding the Coordinates of an Endpoint

$M$ is the midpoint of $\overline{A B}$. $A$ has coordinates (2,2), and $M$ has coordinates $(4,-3)$. Find the coordinates of $B$.

Step 1 Let the coordinates of $B$ equal $(x, y)$.
Step 2 Use the Midpoint Formula.

$$
(4,-3)=\left(\frac{2+x}{2}, \frac{2+y}{2}\right)
$$

Step 3 Find the $x$-coordinate.
Find the $y$-coordinate.

$$
\begin{aligned}
& 4=\frac{2+x}{2} \quad \text { Set the coordinates equal. } \\
& 2(4)=2\left(\frac{2+x}{2}\right) \quad \text { Multiply both sides by 2. } \quad 2(-3)=2\left(\frac{2+y}{2}\right) \\
& 8=2+x \quad \text { Simplify } \\
& \frac{-2}{6}=\frac{-2}{x} \\
& \text { Subtract } 2 \text { from both sides. } \\
& \text { Simplify. }
\end{aligned}
$$

The coordinates of $B$ are $(6,-8)$.
Check $\quad$ Graph points $A$ and $B$ and midpoint $M$.

Point $M$ appears to be the midpoint of $\overline{A B}$.

CHECK
IT OUTI
2. $S$ is the midpoint of $\overline{R T}$. $R$ has coordinates ( $-6,-1$ ), and $S$ has coordinates $(-1,1)$. Find the coordinates of $T$.

## Remember!

The Pythagorean Theorem states that if a right triangle has legs of lengths a and $b$ and a hypotenuse of length $c$, then $a^{2}+b^{2}=c^{2}$.

You can also use coordinates to find the distance between two points or the length of a line segment. To find the length of segment $P Q$, draw a horizontal segment from $P$ and a vertical segment from $Q$ to form a right triangle.

$$
\begin{array}{cc}
c^{2}=a^{2}+b^{2} & \begin{array}{l}
\text { Pythagorean Theorem } \\
c=\sqrt{a^{2}+b^{2}}
\end{array} \\
\begin{array}{r}
\text { Solve for } c . \text { Use the positive square } \\
\text { root to represent distance. }
\end{array}
\end{array}
$$

$$
P Q=\sqrt{\begin{array}{c}
\text { Length of } \\
\text { horizontal segment }
\end{array} \underbrace{2}_{\begin{array}{c}
x_{2}-x_{1} \\
\text { vertical segment }
\end{array}}+(\underbrace{y_{2}-y_{1}}_{\text {Length of }})^{2}}
$$

This equation represents the Distance Formula.

## Distance Formula

In a coordinate plane, the distance $d$ between two points $\left(x_{1}, y_{1}\right)$ and $\left(x_{2}, y_{2}\right)$ is

$$
d=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}} .
$$

Use the Distance Formula to find the distance, to the nearest hundredth, from $A(-2,3)$ to $B(2,-2)$.

$$
\begin{array}{ll}
d=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}} & \text { Distance Formula } \\
d=\sqrt{[2-(-2)]^{2}+(-2-3)^{2}} & \begin{array}{l}
\text { Substitute }(-2,3) \\
\text { for }\left(x_{1}, y_{1}\right) \text { and }
\end{array} \\
d=\sqrt{4^{2}+(-5)^{2}} & \begin{array}{l}
\text { Subtract. }
\end{array} \\
d=\sqrt{16+25} & \text { Simplify powers. }\left(x_{2}, y_{2}\right) . \\
d=\sqrt{41} & \text { Add. }
\end{array}
$$

$$
d \approx 6.40
$$

Find the square root to the nearest hundredth.
3. Use the Distance Formula to find the distance, to the nearest hundredth, from $R(3,2)$ to $S(-3,-1)$.

## E X A MPLE 4 Geography Application

Each unit on the map of Lake Okeechobee represents 1 mile. Delia and her father plan to travel from point $A$ near the town of Okeechobee to point $B$ at Pahokee. To the nearest tenth of a mile, how far do Delia and her father plan to travel?

$$
\begin{aligned}
& d=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}} \\
& d=\sqrt{(33-22)^{2}+(13-39)^{2}} \\
& d=\sqrt{11^{2}+(-26)^{2}} \\
& d=\sqrt{121+676} \\
& d=\sqrt{797} \\
& d \approx 28.2
\end{aligned}
$$

Substitute.

Delia and her father plan to travel about 28.2 miles.
4. Jacob takes a boat from Pahokee to Clewiston. To the nearest tenth of a mile, how far does he travel?

## THINK AND DISCUSS

1. If you use the formula $M\left(\frac{x_{2}+x_{1}}{2}, \frac{y_{2}+y_{1}}{2}\right)$ to find the midpoint of a segment, will you get the correct coordinates for the midpoint? Explain.
2. GET ORGANIZED Copy and complete the graphic organizer. In each box, write a formula. Then make a sketch that will illustrate the formula.

## GUIDED PRACTICE

1. Vocabulary In your own words, describe the midpoint of a line segment.

SEE EXAMPLE 1
p. 330

SEE EXAMPLE 2
p. 331

## SEE EXAMPLE 3

p. 332

## SEE EXAMPLE 4

Find the coordinates of the midpoint of each segment.
2. $\overline{A B}$ with endpoints $A(4,-6)$ and $B(-4,2)$
3. $\overline{C D}$ with endpoints $C(0,-8)$ and $D(3,0)$
4. $\overline{E F}$ with endpoints $E(-8,17)$ and $F(-12,-16)$
5. $M$ is the midpoint of $\overline{L N}$. $L$ has coordinates $(-3,-1)$, and $M$ has coordinates $(0,1)$. Find the coordinates of $N$.
6. $B$ is the midpoint of $\overline{A C}$. $A$ has coordinates $(-3,4)$, and $B$ has coordinates $\left(-1 \frac{1}{2}, 1\right)$. Find the coordinates of $C$.

Use the Distance Formula to find the distance, to the nearest hundredth, between each pair of points.
7. $A(1,-2)$ and $B(-4,-4)$
8. $X(-2,7)$ and $Y(-2,-8)$
9. $V(2,-1)$ and $W(-4,8)$
10. Recreation Each unit on the map of a public park represents 1 kilometer. To the nearest tenth of a kilometer, what is the distance from the campground to the waterfall?

Extra Practice
Skills Practice p. S12
Application Practice p. S32

Find the coordinates of the midpoint of each segment.
11. $\overline{X Y}$ with endpoints $X(-3,-7)$ and $Y(-1,1)$
12. $\overline{M N}$ with endpoints $M(12,-7)$ and $N(-5,-2)$
13. $M$ is the midpoint of $\overline{Q R}$. $Q$ has coordinates $(-3,5)$, and $M$ has coordinates (7, -9). Find the coordinates of $R$.
14. $D$ is the midpoint of $\overline{C E}$. $E$ has coordinates $(-3,-2)$, and $D$ has coordinates $\left(2 \frac{1}{2}, 1\right)$. Find the coordinates of $C$.
15. $Y$ is the midpoint of $\overline{X Z}$. $X$ has coordinates $(0,-1)$, and $Y$ has coordinates $\left(1,-4 \frac{1}{2}\right)$. Find the coordinates of $Z$.

Use the Distance Formula to find the distance, to the nearest hundredth, between each pair of points.
16. $U(0,1)$ and $V(-3,-9)$
17. $M(10,-1)$ and $N(2,-5)$
18. $P(-10,1)$ and $Q(5,5)$
19. $F(6,15)$ and $G(4,24)$
20. Astronomy Each unit on the map of a section of a moon represents 1 kilometer. To the nearest tenth of a kilometer, what is the distance between the two craters?

For Exercises 21 and 22, use the map, and round your answers to the nearest tenth of a mile. Each unit on the map represents 1 mile.
21. How far is it from Cedar City to Milltown along Highway 201?
22. A car breaks down on Route 1 halfway between Jefferson and Milltown. A tow truck is sent out from Jefferson. How far does the truck travel to reach the car?
23. Estimation Estimate the distance between the points
 $(-5.21,1.84)$ and $(16.62,-23.19)$. Explain how you determined your answer.
24. Geometry The coordinates of the vertices of $\triangle A B C$ are $A(1,4), B(-2,-1)$, and $C(3,-2)$. Find the perimeter of $\triangle A B C$ to the nearest whole number.

Find the distance, to the nearest hundredth, between each pair of points.
25. $J(0,3)$ and $K(-6,-9)$
26. $L(-5,2)$ and $M(-8,10)$
27. $N(4,-6)$ and $P(-2,7)$
28. Aviation A Coast Guard helicopter receives a distress signal from a boat. The units on the map represent miles. To the nearest minute, how long will it take the helicopter to reach the boat if the helicopter travels at an average speed of 75 miles per hour?
29. Geometry A diameter of a circle has endpoints $(-2,-5)$ and $(2,1)$.
a. Find the length of the diameter to the nearest tenth.
b. Find the coordinates of the center of the circle.

c. Find the circumference of the circle to the nearest whole number.
30. Travel A group of tourists is traveling by camel in the desert. They are following a straight path from point $(2,4)$ to point $(8,12)$ on a map. Each unit on the map represents 1 mile. An oasis lies at the midpoint of the path. The group has already traveled 3.2 miles. How much farther do they need to go to reach the oasis?
31. Multi-Step Use the Distance Formula to order $\overline{A B}, \overline{C D}$, and $\overline{E F}$ from shortest to longest.
32. Critical Thinking Rebecca found the $x$-coordinate of the midpoint of $\overline{A B}$ with endpoints $A\left(x_{1}, y_{1}\right)$ and $B\left(x_{2}, y_{2}\right)$ by dividing the difference between $x_{2}$ and $x_{1}$ by 2 and then adding the quotient to $x_{1}$. Did this method give the correct $x$-coordinate for the midpoint? Explain.
33. Write About It Explain why the Distance Formula is not
 needed to find the distance between two points that lie on a horizontal or vertical line.

34. This problem will help you prepare for the Multi-Step Test Prep on page 342.

On a map of a city park, the ordered pairs $(3,5)$ and $(8,17)$ mark the starting and ending points of a straight jogging trail. Each unit on the map represents 0.1 mile.
a. What is the length of the trail in miles?
b. How many back-and-forth trips would Marisol need to make on the trail in order to run at least 7 miles?
35. Which segment has a length closest to 4 units?
(A) $\overline{E F}$
(C) $\overline{J K}$
(B) $\overline{G H}$
(D) $\overline{L M}$
36. What is the distance between the points $(7,-3)$ and $(-5,6)$ ?
(F) 4
(H) 15
(G) 9
(J) 21

37. A coordinate plane is placed over the map of a town. A library is located at $(-5,1)$, and a museum is located at $(3,5)$. What is the distance, to the nearest tenth, from the library to the museum?
(A) 4.5 units
(B) 5.7 units
(C) 6.3 units
(D) 8.9 units
38. Short Response Brian is driving along a straight highway. His truck can travel 22 miles per gallon of gasoline, and it has 2 gallons of gas remaining. On a map, the truck's current location is $(7,12)$, and the nearest gas station on the highway is located at $(16,52)$. Each unit on the map represents 1 mile. Will the truck reach the gas station before running out of gas? Support your answer.

## CHALLENGE AND EXTEND

39. Geometry Find the area of a trapezoid with vertices $A(-4,2), B(0,4), C(3,3)$, and $D(-3,0)$. (Hint: The formula for the area of a trapezoid is $\left.A=\frac{1}{2} h\left(b_{1}+b_{2}\right).\right)$
40. $X$ has coordinates $(a, 3 a)$, and $Y$ has coordinates $(-5 a, 0)$. Find the coordinates of the midpoint of $\overline{X Y}$.
41. The coordinates of $P$ are $(a-5,0)$. The coordinates of $Q$ are $(a+1, a)$. The distance between $P$ and $Q$ is 10 units. Find the value of $a$.
42. Find two points on the $y$-axis that are a distance of 5 units from $(4,2)$.
43. The coordinates of $S$ are $(4,5)$. The coordinates of the midpoint of $\overline{S T}$ are $(-1,-7)$. Find the length of $\overline{S T}$.

## SPIRAL REVIEW

44. In the 2007-2008 season, the Orlando Magic won 52 games and lost 30 games. What percent of its games did the team win? Round your answer to the nearest percent. (Lesson 2-9)

Solve each inequality and graph the solutions. (Lesson 3-5)
45. $4 x<7 x+6$
46. $4 y+3 \geq 5 y-8$
47. $6(z+2)>3 z$

Find the slope of each line. (Lesson 5-3)
48.

49.

## 5-6 Direct Variation

## Objective

Identify, write, and graph direct variation.

## Vocabulary

direct variation constant of variation

## Who uses this?

Chefs can use direct variation to determine ingredients needed for a certain number of servings.

A recipe for paella calls for 1 cup of rice to make 5 servings. In other words, a chef needs 1 cup of rice for every 5 servings.

| Rice (c) $\boldsymbol{x}$ | 1 | 2 | 3 | 4 |
| :--- | :---: | :---: | :---: | :---: |
| Servings $y$ | 5 | 10 | 15 | 20 |

Paella is a rice dish that originated in Valencia, Spain.

The equation $y=5 x$ describes this relationship. In this relationship, the number of servings varies directly with the number of cups of rice.

A direct variation is a special type of linear relationship that can be written in the form $y=k x$, where $k$ is a nonzero constant called the constant of variation .

## E X A M P L E 1 Identifying Direct Variations from Equations

Tell whether each equation represents a direct variation. If so, identify the constant of variation.
A $y=4 x$
This equation represents a direct variation because it is in the form $y=k x$. The constant of variation is 4 .

B $-3 x+5 y=0$
$-3 x+5 y=0 \quad$ Solve the equation for $y$.
$\begin{array}{rlr}+3 x & =\frac{+3 x}{3 x} & \text { Since }-3 x \text { is added to } 5 y \text {, add } 3 x \text { to both sides. } \\ \frac{5 y}{5} & =\frac{3 x}{5} & \text { Since } y \text { is multiplied by } 5 \text {, divide both sides by } 5 .\end{array}$

$$
y=\frac{3}{5} x
$$

This equation represents a direct variation because it can be written in the form $y=k x$. The constant of variation is $\frac{3}{5}$.

C $2 x+y=10$
$2 x+y=10 \quad$ Solve the equation for $y$.
$\frac{-2 x}{y}=\frac{-2 x}{-2 x}+10$ Since $2 x$ is added to $y$, subtract $2 x$ from both sides.
This equation does not represent a direct variation because it cannot be written in the form $y=k x$.

Tell whether each equation represents a direct variation. If so, identify the constant of variation.
1a. $3 y=4 x+1$
1b. $3 x=-4 y$
1c. $y+3 x=0$

What happens if you solve $y=k x$ for $k$ ?

$$
\begin{aligned}
& y=k x \\
& \frac{y}{x}=\frac{k x}{x} \quad \text { Divide both sides by } x(x \neq 0) . \\
& \frac{y}{x}=k
\end{aligned}
$$

So, in a direct variation, the ratio $\frac{y}{x}$ is equal to the constant of variation. Another way to identify a direct variation is to check whether $\frac{y}{x}$ is the same for each ordered pair (except where $x=0$ ).

## E X A M P LE 2 Identifying Direct Variations from Ordered Pairs

Tell whether each relationship is a direct variation. Explain.
A

| $x$ | 1 | 3 | 5 |
| :---: | :---: | :---: | :---: |
| $y$ | 6 | 18 | 30 |

Method 1 Write an equation.
$y=6 x \quad$ Each $y$-value is 6 times the corresponding $x$-value.
This is a direct variation because it can be written as $y=k x$, where $k=6$.

Method 2 Find $\frac{y}{x}$ for each ordered pair.
$\frac{6}{1}=6$
$\frac{18}{3}=6$
$\frac{30}{5}=6$

This is a direct variation because $\frac{y}{x}$ is the same for each ordered pair.
B

| $x$ | 2 | 4 | 8 |
| :---: | ---: | ---: | ---: |
| $y$ | -2 | 0 | 4 |

Method 1 Write an equation.

$$
y=x-4 \quad \text { Each } y \text {-value is } 4 \text { less than the corresponding } x \text {-value. }
$$

This is not a direct variation because it cannot be written as $y=k x$.
Method 2 Find $\frac{y}{x}$ for each ordered pair.
$\frac{-2}{2}=-1$
$\frac{0}{4}=0$

$$
\frac{4}{8}=\frac{1}{2}
$$

This is not a direct variation because $\frac{y}{x}$ is not the same for all ordered pairs.

Tell whether each relationship is a direct variation. Explain.
$2 a$.

| $x$ | $y$ |
| ---: | ---: |
| -3 | 0 |
| 1 | 3 |
| 3 | 6 |

2 b .

| $x$ | $y$ |
| :--- | :---: |
| 2.5 | -10 |
| 5 | -20 |
| 7.5 | -30 |

2c.

| $x$ | $y$ |
| ---: | :---: |
| -2 | 5 |
| 1 | 3 |
| 4 | 1 |

If you know one ordered pair that satisfies a direct variation, you can write the equation. You can also find other ordered pairs that satisfy the direct variation.

## E X A M P L E 3 Writing and Solving Direct Variation Equations

The value of $y$ varies directly with $x$, and $y=6$ when $x=12$.
Find $y$ when $x=27$.
Method 1 Find the value of $k$ and then write the equation.

$$
\begin{array}{ll}
y=k x & \text { Write the equation for a direct variation. } \\
6=k(12) & \text { Substitute } 6 \text { for } y \text { and } 12 \text { for } x . \text { Solve for } k . \\
\frac{1}{2}=k & \text { Since } k \text { is multiplied by } 12, \text { divide both sides by } 12 .
\end{array}
$$

The equation is $y=\frac{1}{2} x$. When $x=27, y=\frac{1}{2}(27)=13.5$.
Method 2 Use a proportion.

$$
\begin{aligned}
\frac{6}{12} & \neq \frac{y}{27} & & \text { In a direct variation, } \frac{y}{x} \text { is the same for all values of } x \text { and } y . \\
12 y & =162 & & \text { Use cross products. } \\
y & =13.5 & & \text { Since } y \text { is multiplied by 12, divide both sides by } 12 .
\end{aligned}
$$

3. The value of $y$ varies directly with $x$, and $y=4.5$ when $x=0.5$. Find $y$ when $x=10$.

## E X A MPLE 4 Graphing Direct Variations

The three-toed sloth is an extremely slow animal. On the ground, it travels at a speed of about 6 feet per minute. Write a direct variation equation for the distance $y$ a sloth will travel in $x$ minutes. Then graph.

Step 1 Write a direct variation equation.

$$
\begin{array}{rlr|r|}
\text { distance } & =6 \text { feet per minute } & \text { times } & \text { number of minutes } \\
y & = & 6 & \bullet
\end{array}
$$

Step 2 Choose values of $x$ and generate ordered pairs.

| $x$ | $y=6 x$ | $(x, y)$ |
| :---: | :---: | :---: |
| 0 | $y=6(0)=0$ | $(0,0)$ |
| 1 | $y=6(1)=6$ | $(1,6)$ |
| 2 | $y=6(2)=12$ | $(2,12)$ |

Step 3 Graph the points and connect.

4. The perimeter $y$ of a square varies directly with its side length $x$. Write a direct variation equation for this relationship. Then graph.

Look at the graph in Example 4. It passes through $(0,0)$ and has a slope of 6. The graph of any direct variation $y=k x$

- is a line through $(0,0)$. has a slope of $k$.

## THINK AND DISCUSS

1. How do you know that a direct variation is linear?
2. How does the graph of a direct variation differ from the graphs of other types of linear relationships?

3. GET ORGANIZED Copy and complete the graphic organizer. In each box, describe how you can use the given information to identify a direct variation.

| Recognizing a Direct Variation |  |  |

## Exercises

## GUIDED PRACTICE

1. Vocabulary If $x$ varies directly with $y$, then the relationship between the two variables is said to be a $\qquad$ ? . (direct variation or constant of variation)
SEE EXAMPLE 1

Tell whether each equation represents a direct variation. If so, identify the constant of variation.
2. $y=4 x+9$
3. $2 y=-8 x$
4. $x+y=0$

SEE EXAMPLE 2 Tell whether each relationship is a direct variation. Explain.
p. 337
5.

| $x$ | 10 | 5 | 2 |
| :---: | :---: | :---: | :---: |
| $y$ | 12 | 7 | 4 |

6. 

| $x$ | 3 | -1 | -4 |
| :--- | ---: | ---: | ---: |
| $y$ | -6 | 2 | 8 |

SEE EXAMPLE $\quad 3$
7. The value of $y$ varies directly with $x$, and $y=-3$ when $x=1$. Find $y$ when $x=-6$.
8. The value of $y$ varies directly with $x$, and $y=6$ when $x=18$. Find $y$ when $x=12$.
p. 338
9. Wages Cameron earns $\$ 7$ per hour at her after-school job. The total amount of her paycheck varies directly with the amount of time she works. Write a direct variation equation for the amount of money $y$ that she earns for working $x$ hours. Then graph.

## PRACTICE AND PROBLEM SOLVING

Tell whether each equation represents a direct variation. If so, identify the constant of variation.
10. $y=\frac{1}{6} x$
11. $4 y=x$
12. $x=2 y-12$

Tell whether each relationship is a direct variation. Explain.
13.

| $x$ | 6 | 9 | 17 |
| :---: | :---: | :---: | :---: |
| $y$ | 13.2 | 19.8 | 37.4 |

14.

## Extra Practice

Skills Practice p. S13
Application Practice p. S32

The Mars rover Spirit landed on Mars in January 2004 and immediately began sending photos of the planet's surface back to Earth.
15. The value of $y$ varies directly with $x$, and $y=8$ when $x=-32$. Find $y$ when $x=64$.
16. The value of $y$ varies directly with $x$, and $y=\frac{1}{2}$ when $x=3$. Find $y$ when $x=1$.
17. While on his way to school, Norman saw that the cost of gasoline was $\$ 2.50$ per gallon. Write a direct variation equation to describe the cost $y$ of $x$ gallons of gas. Then graph.

Tell whether each relationship is a direct variation. Explain your answer.
18. The equation $-15 x+4 y=0$ relates the length of a videotape in inches $x$ to its approximate playing time in seconds $y$.
19. The equation $y-2.00 x=2.50$ relates the cost $y$ of a taxicab ride to distance $x$ of the cab ride in miles.

Each ordered pair is a solution of a direct variation. Write the equation of direct variation. Then graph your equation and show that the slope of the line is equal to the constant of variation.
20. $(2,10)$
21. $(-3,9)$
22. $(8,2)$

30. $(4,6)$
31. $(3,4)$
32. $(5,1)$
33. $(1,-6)$
34. $\left(-1, \frac{1}{2}\right)$
35. $(7,2)$

Astronomy Weight varies directly with gravity. A Mars lander weighed 767 pounds on Earth but only 291 pounds on Mars. Its accompanying Mars rover weighed 155 pounds on Mars. How much did it weigh on Earth? Round your answer to the nearest pound.
37. Environment Mischa bought an energy-efficient washing machine. She will save about 15 gallons of water per wash load.
a. Write an equation of direct variation to describe how many gallons of water $y$ Mischa saves for $x$ loads of laundry she washes.
b. Graph your direct variation from part a. Is every point on the graph a solution in this situation? Why or why not?
c. If Mischa does 2 loads of laundry per week, how many gallons of water will she have saved at the end of a year?
38. Critical Thinking If you double an $x$-value in a direct variation, will the corresponding $y$-value double? Explain.
39. Write About It In a direct variation $y=k x, k$ is sometimes called the "constant of proportionality." How are proportions related to direct variations?

41. Which equation does NOT represent a direct variation?
(A) $y=\frac{1}{3} x$
(B) $y=-2 x$
(C) $y=4 x+1$
(D) $6 x-y=0$
42. Identify which set of data represents a direct variation.
(F)

| $x$ | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: |
| $y$ | 1 | 2 | 3 |

(H)

| $x$ | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: |
| $y$ | 3 | 5 | 7 |

(G)

| $x$ | 1 | 2 | 3 |
| :---: | :---: | :---: | :---: |
| $y$ | 0 | 1 | 2 |

(1)

| $x$ | 1 | 2 | 3 |

| $y$ | 3 | 4 | 5 |

43. Two yards of fabric cost $\$ 13$, and 5 yards of fabric cost $\$ 32.50$. Which equation relates the cost of the fabric $c$ to its length $\ell$ ?
(A) $c=2.6 \ell$
(B) $c=6.5 \ell$
(C) $c=13 \ell$
(D) $c=32.5 \ell$
44. Gridded Response A car is traveling at a constant speed. After 3 hours, the car has traveled 180 miles. If the car continues to travel at the same constant speed, how many hours will it take to travel a total of 270 miles?

## CMALLENGE AND EXTEND

45. Transportation The function $y=20 x$ gives the number of miles $y$ that a sportutility vehicle (SUV) can travel on $x$ gallons of gas. The function $y=60 x$ gives the number of miles $y$ that a hybrid car can travel on $x$ gallons of gas.
a. If you drive 120 miles, how much gas will you save by driving the hybrid instead of the SUV?
b. Graph both functions on the same coordinate plane. Will the lines ever meet other than at the origin? Explain.
c. What if...? Shannon drives 15,000 miles in one year. How many gallons of gas will she use if she drives the SUV? the hybrid?
46. Suppose the equation $a x+b y=c$, where $a, b$, and $c$ are real numbers, describes a direct variation. What do you know about the value of $c$ ?

## SPIRAL REVIEW

Solve for the indicated variable. (Lesson 2-5)
47. $p+4 q=7 ; p$
48. $\frac{s-5}{t}=2 ; s$
49. $x y+2 y=4 ; x$

Determine a relationship between the $x$ - and $y$-values and write an equation.
(Lesson 4-3)
50.

## Characteristics of Linear Functions

Heart Health People who exercise need to be aware of their maximum heart rate.

1. One way to estimate your maximum heart rate $m$ is to subtract $85 \%$ of your age in years from 217. Create a table of values that shows the maximum heart rates for people ages 13 to 18 . Then write an equation to describe the data in the table.
2. Use your table from Problem 1 to graph the relationship between age and maximum heart rate. What are the intercepts? What is the slope?
3. What do the intercepts represent in this situation?
4. What does the slope represent? Explain why the slope is negative.
5. Another formula for estimating maximum heart rate is $m=206.3-0.711 a$, where $a$ represents age in years. Describe how this equation is different from your equation in Problem 1. Include slope and intercepts in your description.
6. Which equation gives a higher maximum heart rate for people ages 75 and younger?
7. To be exercising in your aerobic training zone means that your heart rate is $70 \%$ to $80 \%$ of your maximum heart rate. Write two equations that someone could use to estimate the range of heart rates that are within his or her aerobic training zone. Use your equation for maximum heart rate from Problem 1.

## Quiz for Lessons 5-1 Through 5-6

## 5-1 Identifying Linear Functions

Tell whether the given ordered pairs satisfy a linear function. Explain.
1.

| $x$ | -2 | -1 | 0 | 1 | 2 |
| :---: | ---: | ---: | ---: | ---: | ---: |
| $y$ | 1 | 0 | 1 | 4 | 9 |

2. $\{(-3,8),(-2,6),(-1,4),(0,2),(1,0)\}$

## 5-2 Using Intercepts

Use intercepts to graph the line described by each equation.
3. $2 x-4 y=16$
4. $-3 y+6 x=-18$
5. $y=-3 x+3$

## $\mathcal{C}$

## 5-3 Rate of Change and Slope

6. The chart gives the amount of water in a rain gauge in inches at various times. Graph the data and show the rates of change.

| Time (h) | 1 | 2 | 3 | 4 | 5 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Rain (in.) | 0.2 | 0.4 | 0.7 | 0.8 | 1.0 |

## 5-4 The Slope Formula

Find the slope of each line. Then tell what the slope represents.
7.

8.

9.

## 5-5 The Midpoint and Distance Formulas

10. Find the coordinates of the midpoint of $\overline{X Y}$ with endpoints $X(-4,6)$ and $Y(3,8)$.
11. On a treasure map, the coordinates of a crooked palm tree are $(3,6)$, and the coordinates of a buried treasure chest are $(12,18)$. Each unit on the map represents 10 feet. What is the distance in feet between the palm tree and the treasure chest?

## 5-6 Direct Variation

Tell whether each relationship is a direct variation. If so, identify the constant of variation.
12.

| $x$ | 1 | 4 | 8 | 12 |
| :---: | ---: | ---: | ---: | ---: |
| $y$ | 3 | 6 | 10 | 14 |

## Slope-Intercept Form

## Objectives

Write a linear equation in slope-intercept form.

Graph a line using slope-intercept form.

## Who uses this?

Consumers can use slope-intercept form to model and calculate costs, such as the cost of renting a moving van. (See Example 4.)

You have seen that you can graph a line if you know two points on the line. Another way is to use the slope of the line and the point that contains the $y$-intercept.

## E X A M P LE 1 Graphing by Using Slope and $\boldsymbol{y}$-intercept

Graph the line with slope -2 and $y$-intercept 4 .
Step 1 The $y$-intercept is 4, so the line contains $(0,4)$. Plot $(0,4)$.

Step 2 Slope $=\frac{\text { change in } y}{\text { change in } x}=\frac{-2}{1}$
Count 2 units down and 1 unit right from $(0,4)$ and plot another point.

Step 3 Draw the line through the two points.

Graph each line given the slope and $y$-intercept.
1a. slope $=2, y$-intercept $=-3 \quad$ lb. slope $=-\frac{2}{3}, y$-intercept $=1$
If you know the slope of a line and the $y$-intercept, you can write an equation that describes the line.
Step 1 If a line has slope 2 and the $y$-intercept is 3 , then $m=2$ and $(0,3)$ is on the line. Substitute these values into the slope formula.

Slope formula $\rightarrow m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}} \quad 2=\frac{y-3}{x-0} \leftarrow$ Since you don't know

$$
\left(x_{2}, y_{2}\right) \text {, use }(x, y) \text {. }
$$

Step 2 Solve for $y: 2=\frac{y-3}{x-0}$

$$
\begin{array}{rlrl}
2 & =\frac{y-3}{x} & & \text { Simplify the denominator. } \\
2 \cdot x & =\left(\frac{y-3}{x}\right) \cdot x & \text { Multiply both sides by } x . \\
2 x & =y-3 & \\
\frac{+3}{2 x+3} & =y, \text { or } y=2 x+3 & \text { Add } 3 \text { to both sides. } \\
2 x+3
\end{array}
$$

## Slope-Intercept Form of a Linear Equation

If a line has slope $m$ and the $y$-intercept is $b$, then the line is described by the equation $y=m x+b$.

Any linear equation can be written in slope-intercept form by solving for $y$ and simplifying. In this form, you can immediately see the slope and $y$-intercept. Also, you can quickly graph a line when the equation is written in slope-intercept form.

## E X A M P L E 2 Writing Linear Equations in Slope-Intercept Form

Write the equation that describes each line in slope-intercept form.
A slope $=\frac{1}{3}, y$-intercept $=6$
B slope $=0, y$-intercept $=-5$
$y=m x+b \quad$ Substitute the given $\quad y=m x+b$
$y=\frac{1}{3} x+6 \quad \begin{array}{cc}\text { values for } m \text { and } b . & y=0 x+(-5)\end{array}$

$$
y=-5
$$

C

Step 1 Find the $y$-intercept. The graph crosses the $y$-axis at $(0,1)$, so $b=1$.

Step 2 Find the slope. The line contains the points $(0,1)$ and $(1,3)$.
$m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}} \quad$ Use the slope formula.

$$
m=\frac{3-1}{1-0}=\frac{2}{1}=2 \quad \begin{gathered}
\text { Substitute }(0,1) \text { for }\left(x_{1}, y_{1}\right) \\
\text { and }(1,3) \text { for }\left(x_{2}, y_{2}\right) .
\end{gathered}
$$

Step 3 Write the equation.

$$
\begin{array}{ll}
y=m x+b & \text { Write the slope-intercept form. } \\
y=2 x+1 & \text { Substitute } 2 \text { for } m \text { and } 1 \text { for } b .
\end{array}
$$

D slope $=4,(2,5)$ is on the line
Step 1 Find the $y$-intercept.

$$
\begin{array}{rlr}
y & =m x+b & \text { Write the slope-intercept form. } \\
5 & =4(2)+b & \text { Substitute } 4 \text { for } m, 2 \text { for } x \text {, and } 5 \text { for } y . \\
5 & =8+b & \text { Solve for } b \text {. Since } 8 \text { is added to } b \text {, subract } 8 \text { from both } \\
\frac{-8}{-3} & =\frac{-8}{} \quad & \text { sides to undo the addition. }
\end{array}
$$

Step 2 Write the equation.

$$
\begin{array}{ll}
y=m x+b & \text { Write the slope-intercept form. } \\
y=4 x+(-3) & \text { Substitute } 4 \text { for } m \text { and }-3 \text { for } b . \\
y=4 x-3 &
\end{array}
$$

Write the equation that describes each line in slope-intercept form.
2a. slope $=-12, y$-intercept $=-\frac{1}{2}$
2b. slope $=1, y$-intercept $=0$
2c. slope $=8,(-3,1)$ is on the line.

## Helpful Hint

To divide $(8-3 x)$ by 2, you can multiply by $\frac{1}{2}$ and use the Distributive Property.

$$
\begin{aligned}
& \frac{8-3 x}{2}=\frac{1}{2}(8-3 x) \\
& \quad=\frac{1}{2}(8)+\frac{1}{2}(-3 x) \\
& \quad=4-\frac{3}{2} x
\end{aligned}
$$

Using Slope-Intercept Form to Graph
Write each equation in slope-intercept form. Then graph the line described by the equation.
A $y=4 x-3$
$y=4 x-3$ is in the form $y=m x+b$.
slope: $m=4=\frac{4}{1}$
$y$-intercept: $b=-3$
Step 1 Plot $(0,-3)$.
Step 2 Count 4 units up and 1 unit right and plot another point.
Step 3 Draw the line connecting the two
 points.

B $y=-\frac{2}{3} x+2$
$y=-\frac{2}{3} x+2$ is in the form $y=m x+b$.
slope: $m=-\frac{2}{3}=\frac{-2}{3}$
$y$-intercept: $b=2$
Step $1 \operatorname{Plot}(0,2)$
Step 2 Count 2 units down and 3 units right and plot another point.
Step 3 Draw the line connecting the two points.
$3 x+2 y=8$
Step 1 Write the equation in slope-intercept form by solving for $y$.

$$
\begin{aligned}
3 x+2 y & =8 & & \\
-3 x & & \frac{-3 x}{8-3 x} & \\
\frac{2 y}{2} & =\frac{8-3 x}{2} & & \text { Subtract } 3 x \text { from both sides. } \\
y & =4-\frac{3}{2} x & & \frac{3 x}{2}=\frac{3}{2} x \\
y & =-\frac{3}{2} x+4 & & \text { Write the equation in the form } y=m x+b .
\end{aligned}
$$

Step 2 Graph the line.
$y=-\frac{3}{2} x+4$ is in the form $y=m x+b$.
slope: $m=-\frac{3}{2}=\frac{-3}{2}$
$y$-intercept: $b=4$

- Plot (0, 4).
- Then count 3 units down and 2 units right
 and plot another point.
- Draw the line connecting the two points.

CHECK
IT OUT!

Write each equation in slope-intercept form. Then graph the line described by the equation.
3a. $y=\frac{2}{3} x$
3b. $6 x+2 y=10$
3c. $y=-4$

## E X A M P L E 4 Consumer Application

To rent a van, a moving company charges $\$ 30.00$ plus $\$ 0.50$ per mile. The cost as a function of the number of miles driven is shown in the graph.
a. Write an equation that represents the cost as a function of the number of miles.

| Cost is $\$ 0.50$ per mile | times | miles | plus $\$ 30.00$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $y$ | $=$ | 0.5 |  |  |  |  |
| $y$ |  |  | $x$ | + | 30 |  |

An equation is $y=0.5 x+30$.
b. Identify the slope and $y$-intercept and describe their meanings.

The $y$-intercept is 30 . This is the cost for 0 miles, or the initial fee of $\$ 30.00$.
The slope is 0.5 . This is the rate of change of the cost: $\$ 0.50$ per mile.
c. Find the cost of the van for 150 miles.
$y=0.5 x+30$
$=0.5(150)+30=105 \quad$ Substitute 150 for $x$ in the equation.
The cost of the van for 150 miles is $\$ 105$.
4. A caterer charges a $\$ 200$ fee plus $\$ 18$ per person served. The cost as a function of the number of guests is shown in the graph.
a. Write an equation that represents the cost as a function of the number of guests.
b. Identify the slope and $y$-intercept and describe their meanings.
c. Find the cost of catering an event for 200 guests.

## THINK AND DISCUSS

1. If a linear function has a $y$-intercept of $b$, at what point does its graph cross the $y$-axis?
2. Where does the line described by $y=4.395 x-23.75$ cross the $y$-axis?
3. GET ORGANIZED Copy and complete the graphic organizer.

## GUIDED PRACTICE

SEE EXAMPLE 1 Graph each line given the slope and $y$-intercept.
p. 344

1. slope $=\frac{1}{3}, y$-intercept $=-3$
2. slope $=0.5, y$-intercept $=3.5$
3. slope $=5, y$-intercept $=-1$
4. slope $=-2, y$-intercept $=2$

SEE EXAMPLE 2 Write the equation that describes each line in slope-intercept form.
p. 345
5.

6. slope $=8, y$-intercept $=2$
7. slope $=0, y$-intercept $=-3$
8. slope $=5,(2,7)$ is on the line.
9. slope $=-2,(1,-3)$ is on the line.

SEE EXAMPLE 3 Write each equation in slope-intercept form. Then graph the line described by the
p. 346 equation.
10. $y=\frac{2}{5} x-6$
11. $3 x-y=1$
12. $2 x+y=4$

SEE EXAMPLE 4
p. 347
13. Helen is in a bicycle race. She has already biked 10 miles and is now biking at a rate of 18 miles per hour. Her distance as a function of time is shown in the graph.
a. Write an equation that represents the distance Helen has biked as a function of time.
b. Identify the slope and $y$-intercept and describe their meanings.
c. How far will Helen have biked after 2 hours?

## Extra Practice

Skills Practice p. S13 Application Practice p. S32

Graph each line given the slope and $y$-intercept.
14. slope $=\frac{1}{4}, y$-intercept $=7$
15. slope $=-6, y$-intercept $=-3$
16. slope $=1, y$-intercept $=-4$
17. slope $=-\frac{4}{5}, y$-intercept $=6$

Write the equation that describes each line in slope-intercept form.
18.

20. slope $=-\frac{2}{3}, y$-intercept $=2$
21. slope $=-\frac{1}{2},(6,4)$ is on the line.
22. slope $=0,(6,-8)$ is on the line.

Write each equation in slope-intercept form. Then graph the line described by the equation.
23. $-\frac{1}{2} x+y=4$
24. $\frac{2}{3} x+y=2$
25. $2 x+y=8$
26. Fitness Pauline's health club has an enrollment fee of $\$ 175$ and costs $\$ 35$ per month. Total cost as a function of number of membership months is shown in the graph.
a. Write an equation that represents the total cost as a function of months.
b. Identify the slope and $y$-intercept and describe their meanings.
c. Find the cost of one year of membership.
27. A company rents video games. The table shows the
 linear relationship between the number of games a customer can rent at one time and the monthly cost of the service.
a. Graph the relationship.
b. Write an equation that represents the monthly cost as a function of games rented at one time.

| Games Rented <br> at One Time | 1 | 2 | 3 |
| :--- | :---: | :---: | :---: |
| Monthly Cost (\$) | 14 | 18 | 22 |

Critical Thinking Tell whether each situation is possible or impossible. If possible, draw a sketch of the graphs. If impossible, explain.
28. Two different lines have the same slope.
29. Two different linear functions have the same $y$-intercept.
30. Two intersecting lines have the same slope.
31. A linear function does not have a $y$-intercept.

Match each equation with its corresponding graph.
32.

33.

34.

A. $y=2 x-1$
B. $y=\frac{1}{2} x-1$
C. $y=-\frac{1}{2} x+1$
35. Write About It Write an equation that describes a vertical line. Can you write this equation in slope-intercept form? Why or why not?
36. This problem will prepare you for the Multi-Step Test Prep on page 376.
a. Ricardo and Sam walk from Sam's house to school. Sam lives 3 blocks from Ricardo's house. The graph shows their distance from Ricardo's house as they walk to school. Create a table of these values.
b. Find an equation for the distance as a function of time.
c. What are the slope and $y$-intercept? What do they represent in this situation?

37. Which function has the same $y$-intercept as $y=\frac{1}{2} x-2$ ?
(A) $2 x+3 y=6$
(B) $x+4 y=-8$
(C) $-\frac{1}{2} x+y=4$
(D) $\frac{1}{2} x-2 y=-2$
38. What is the slope-intercept form of $x-y=-8$ ?
(F) $y=-x-8$
(G) $y=x-8$
(H) $y=-x+8$
(J) $y=x+8$
39. Which function has a $y$-intercept of 3 ?
(A) $2 x-y=3$
(B) $2 x+y=3$
(C) $2 x+y=6$
(D) $y=3 x$
40. Gridded Response What is the slope of the line described by $-6 x=-2 y+5$ ?
41. Short Response Write a function whose graph has the same slope as the line described by $3 x-9 y=9$ and the same $y$-intercept as $8 x-2 y=6$. Show your work.

## CHALLENGE AND EXTEND

42. The standard form of a linear equation is $A x+B y=C$. Rewrite this equation in slope-intercept form. What is the slope? What is the $y$-intercept?
43. What value of $n$ in the equation $n x+5=3 y$ would give a line with slope -2 ?
44. If $b$ is the $y$-intercept of a linear function whose graph has slope $m$, then $y=m x+b$ describes the line. Below is an incomplete justification of this statement. Fill in the missing information.

| Statements | Reasons |
| :--- | :--- |
| 1. $m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}$ | 1. Slope formula |
| 2. $m=\frac{y-b}{x-0}$ | 2. By definition, if $b$ is the $y$-intercept, then $(\square, b)$ is a point on <br> the line. $(x, y)$ is any other point on the line. |
| 3. $m=\frac{y-b}{x}$ | 3.4. Multiplication Property of Equality (Multiply both sides of the <br> equation by $x)$. |
| 4. $m \square=y-b$ <br> $y=m x+b$ | 5. |

## SPIRAL REVIEW

Define a variable and write an inequality for each situation. Graph the solutions. (Lesson 3-1)
45. Molly has, at most, 2 hours to work out at the gym today.
46. Mishenko is hoping to save at least $\$ 300$ this month.

Solve each inequality. (Lesson 3-5)
47. $3 n \leq 2 n+8$
48. $4 x-4>2(x+5)$
49. $2(2 t+1)>6 t+8$
50. The amount of water conditioner needed for an aquarium varies directly with the capacity of the aquarium. For every 10 gallons of water, you need 1 teaspoon of conditioner. Write a direct variation equation for the amount of water conditioner $y$ needed for an aquarium that holds $x$ gallons of water. Then graph. (Lesson 5-6)

## 5-8 Point-Slope Form

## Objectives

Graph a line and write a linear equation using point-slope form.
Write a linear equation given two points.

## Why learn this?

You can use point-slope form to represent a cost function, such as the cost of placing a newspaper ad. (See Example 5.)

If you know the slope and any point on the line, you can write an equation of the line by using the slope formula. For example, suppose a line has a slope of 3 and contains $(2,1)$. Let $(x, y)$ be any other point on the line.

Slope formula
$m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}} \longrightarrow 3=\frac{y-1}{x-2}$ $3(x-2)=\left(\frac{y-1}{x-2}\right)(x-2) \quad$ Multiplication Property of Equality

$$
3(x-2)=y-1
$$

$$
y-1=3(x-2)
$$

## KITTENS AVAILABLE

 to good home. 2 mo. old, litter trained. Very cute and playful! \$10 adoption fee.
## Point-Slope Form of a Linear Equation

The line with slope $m$ that contains the point $\left(x_{1}, y_{1}\right)$ can be described by the equation $y-y_{1}=m\left(x-x_{1}\right)$.

## E X A M P LE 1 Writing Linear Equations in Point-Slope Form

Write an equation in point-slope form for the line with the given slope that contains the given point.

$$
\begin{aligned}
& \text { A slope }=\frac{5}{2} ;(-3,0) \\
& y-y_{1}=m\left(x-x_{1}\right) \quad \text { Write the point-slope form. } \\
& y-0=\frac{5}{2}[x-(-3)] \quad \text { Substitute } \frac{5}{2} \text { for } m,-3 \text { for } x_{1} \text {, and } \\
& y-0=\frac{5}{2}(x+3) \quad \text { Rewrite subtraction of negative } \\
& \text { numbers as addition. } \\
& B \text { slope }=-7 ;(4,2) \\
& y-y_{1}=m\left(x-x_{1}\right) \\
& y-2=-7(x-4) \\
& \text { C slope }=0 ;(-2,-3) \\
& y-y_{1}=m\left(x-x_{1}\right) \\
& y-(-3)=0[x-(-2)] \\
& y+3=0(x+2)
\end{aligned}
$$

Write an equation in point-slope form for the line with the given slope that contains the given point.
1a. slope $=2$; $\left(\frac{1}{2}, 1\right)$
1b. slope $=0 ;(3,-4)$

In Lesson 5-7, you graphed a line given its equation in slope-intercept form. You can also graph a line when given its equation in point-slope form. Start by using the equation to identify a point on the line. Then use the slope of the line to identify a second point.

## E X A M P E 2 Using Point-Slope Form to Graph

Graph the line described by each equation.
A $y-1=3(x-1)$
$y-1=3(x-1)$ is in the form $y-y_{1}=m\left(x-x_{1}\right)$.
The line contains the point $(1,1)$.
slope: $m=3=\frac{3}{1}$
Step 1 Plot $(1,1)$.
Step 2 Count 3 units up and 1 unit right and plot another point.
Step 3 Draw the line connecting the two points.

B $y+2=-\frac{1}{2}(x-3)$
Step 1 Write the equation in point-slope form: $y-y_{1}=m\left(x-x_{1}\right)$.

## Helpful Hint

For a negative fraction, you can write the negative sign in one of three places.
$-\frac{1}{2}=\frac{-1}{2}=\frac{1}{-2}$

$$
y-(-2)=-\frac{1}{2}(x-3) \quad \text { Rewrite addition of } 2 \text { as subtraction of }-2 .
$$

$y-(-2)=-\frac{1}{2}(x-3) \quad$ Rewrite addition of 2 as subtraction of -2 .
Step 2 Graph the line.
The line contains the point $(3,-2)$.
slope: $m=-\frac{1}{2}=\frac{1}{-2}$

- Plot $(3,-2)$.
- Count 1 unit up and 2 units left and plot another point.
- Draw the line connecting the two points.

Graph the line described by each equation.
2a. $y+2=-(x-2)$
2b. $y+3=-2(x-1)$

## E X A M P L E 3 Writing Linear Equations in Slope-Intercept Form

Write the equation that describes each line in slope-intercept form.
A slope $=-4,(-1,-2)$ is on the line.
Step 1 Write the equation in point-slope form: $y-y_{1}=m\left(x-x_{1}\right)$.
$y-(-2)=-4[x-(-1)]$
Step 2 Write the equation in slope-intercept form by solving for $y$.

$$
\begin{aligned}
y-(-2) & =-4[x-(-1)] \\
y+2 & =-4(x+1) \\
y+2 & =-4 x-4 \quad \text { Rewrite subtraction of negative numbers as } \\
\frac{-2}{y} & =\frac{-2}{-4 x-6} \quad \text { addition. Distribute }-4 \text { on the right side. }
\end{aligned}
$$

B $(1,-4)$ and $(3,2)$ are on the line.
Step 1 Find the slope.

$$
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{2-(-4)}{3-1}=\frac{6}{2}=3
$$

Step 2 Substitute the slope and one of the points into the point-slope form. Then write the equation in slope-intercept form.

$$
y-y_{1}=m\left(x-x_{1}\right)
$$

$$
y-2=3(x-3) \quad \text { Use }(3,2)
$$

$$
y-2=3 x-9 \quad \text { Distribute } 3 \text { on the right side }
$$

$$
y=3 x-7 \quad \text { Add } 2 \text { to both sides. }
$$

C $x$-intercept $=-2, y$-intercept $=4$
Step 1 Use the intercepts to find two points: $(-2,0)$ and $(0,4)$.
Step 2 Find the slope.

$$
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{4-0}{0-(-2)}=\frac{4}{2}=2
$$

Step 3 Write the equation in slope-intercept form.

$$
\begin{array}{ll}
y=m x+b & \text { Write the slope-intercept form } \\
y=2 x+4 & \text { Substitute } 2 \text { for } m \text { and } 4 \text { for } b
\end{array}
$$

## CHECK IT OUT!

Write the equation that describes each line in slope-intercept form.
3a. slope $=\frac{1}{3},(-3,1)$ is on the line.
3b. $(1,-2)$ and $(3,10)$ are on the line.

## E X A M P L E 4 Using Two Points to Find Intercepts

The points $(4,8)$ and $(-1,-12)$ are on a line. Find the intercepts.
Step 1 Find the slope.

$$
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{-12-8}{-1-4}=\frac{-20}{-5}=4
$$

Step 2 Write the equation in slope-intercept form.

$$
\begin{aligned}
y-y_{1} & =m\left(x-x_{1}\right) & & \text { Write the point-slope form. } \\
y-8 & =4(x-4) & & \text { Substitute }(4,8) \text { for }\left(x_{1}, y_{1}\right) \text { and } 4 \text { for } m . \\
y-8 & =4 x-16 & & \text { Distribute } 4 \text { on the right side. } \\
y & =4 x-8 & & \text { Add } 8 \text { to both sides. }
\end{aligned}
$$

Step 3 Find the intercepts.

| $x$-intercept: |  | $y$-intercept: |  |
| :--- | :--- | :--- | :--- |
| $y=4 x-8$ | Replace y with | $y=4 x-8$ | Use the slope- |
| $0=4 x-8$ | 0 and solve | $b=-8$ | intercept form |
| $8=4 x$ | for $x$. |  | to identify the |
| $2=x$ |  |  | y-intercept. |

The $x$-intercept is 2 , and the $y$-intercept is -8 .
4. The points $(2,15)$ and $(-4,-3)$ are on a line. Find the intercepts.

The cost to place an ad in a ceo City Gazette os newspaper for one week is a linear function of the number of lines in the ad. The costs for 3,5 , and 10 lines are shown. Write an equation in

Newspaper Ad Costs

| Lines | 3 | 5 | 10 |
| :--- | :---: | :---: | :---: |
| Cost (\$) | 13.50 | 18.50 | 31 | slope-intercept form that represents the function. Then find the cost of an ad that is 18 lines long.

## 1 Understand the Problem

- The answer will have two parts-an equation in slope-intercept form and the cost of an ad that is 18 lines long.
- The ordered pairs given in the table satisfy the equation.

## 2 Make a Plan

First, find the slope. Then use point-slope form to write the equation. Finally, write the equation in slope-intercept form.

## - 3 Solve

Step 1 Choose any two ordered pairs from the table to find the slope.

$$
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{18.50-13.50}{5-3}=\frac{5}{2}=2.5 \quad \text { Use }(3,13.50) \text { and }(5,18.50)
$$

Step 2 Substitute the slope and any ordered pair from the table into the point-slope form.

$$
\begin{align*}
y-y_{1} & =m\left(x-x_{1}\right) \\
y-31 & =2.5(x-10) \tag{10,31}
\end{align*}
$$

Step 3 Write the equation in slope-intercept form by solving for $y$.

$$
\begin{aligned}
y-31 & =2.5(x-10) \\
y-31 & =2.5 x-25 \\
y & =2.5 x+6
\end{aligned}
$$

Distribute 2.5.
Add 31 to both sides.
Step 4 Find the cost of an ad containing 18 lines by substituting 18 for $x$.

$$
\begin{aligned}
& y=2.5 x+6 \\
& y=2.5(18)+6=51
\end{aligned}
$$

The cost of an ad containing 18 lines is $\$ 51$.

## 4 Look Back

Check the equation by substituting the ordered pairs (3, 13.50) and (5, 18.50).

| $y=2.5 x+6$ |  |  | $y=2.5 x+6$ |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 13.50 | $2.5(3)+6$ |  |  | 18.50 | $2.5(5)+6$ |
| 13.5 | $7.5+6$ |  | 18.5 | $12.5+6$ |  |
| 13.5 | $13.5 \checkmark$ |  | 18.5 | $18.5 \checkmark$ |  |

5. What if...? At a different newspaper, the costs to place an ad for one week are shown. Write an equation in slopeintercept form that represents this linear function. Then find the cost of an ad that is 21 lines long.

| Lines | Cost (\$) |
| :---: | :---: |
| 3 | 12.75 |
| 5 | 17.25 |
| 10 | 28.50 |

## THINK AND DISCUSS

1. How are point-slope form and slope-intercept form alike? different?
2. When is point-slope form useful? When is slope-intercept form useful?

3. GET ORGANIZED Copy and complete the graphic organizer. In each box, describe how to find the equation of a line by using the given method.

## 5-8

## Exercises

## GUIDED PRACTICE

SEE EXAMPLE 1
p. 351

Write an equation in point-slope form for the line with the given slope that contains the given point.

Extra Practice
Skills Practice p. S13
Application Practice p. S32

As altitude increases, the amount of breathable oxygen decreases. At elevations above 8000 feet, this can cause altitude sickness. To prevent this, mountain climbers often use tanks containing a mixture of air and pure oxygen.

Graph the line described by each equation.
20. $y-4=-\frac{1}{2}(x+3)$
21. $y+2=\frac{3}{5}(x-1)$
22. $y-0=4(x-1)$

## Write the equation that describes each line in slope-intercept form.

23. slope $=-\frac{2}{7},(14,-3)$ is on the line.
24. slope $=-6,(9,3)$ is on the line.
25. $(2,7)$ and $(4,-4)$ are on the line.
26. $x$-intercept $=3, y$-intercept $=-6$
27. slope $=\frac{4}{5},(-15,1)$ is on the line.
28. $(7,8)$ and $(-7,6)$ are on the line.
29. $(-1,2)$ and $(4,-23)$ are on the line.
30. $x$-intercept $=4, y$-intercept $=-1$

Each pair of points is on a line. Find the intercepts.
31. $(-1,-4)$ and $(6,10) \quad$ 32. $(3,4)$ and $(-6,16)$
34. History The amount of fresh water left in the tanks of a 19th-century clipper ship is a linear function of the time since the ship left port, as shown in the table. Write an equation in slopeintercept form that represents the function. Then find the amount of water that will be left in the ship's tanks 50 days after leaving port.
35. Science At higher altitudes, water boils at lower temperatures. This relationship between altitude and boiling point is linear. At an altitude of 1000 feet, water boils at $210^{\circ} \mathrm{F}$. At an altitude of 3000 feet, water boils at $206^{\circ} \mathrm{F}$. Write an equation in slope-intercept form that represents this linear function. Then find the boiling point at 6000 feet.
36. Consumer Economics Lora has a gift card from an online music store where all downloads cost the same amount. After downloading 2 songs, the balance on her card was $\$ 18.10$. After downloading a total of 5 songs, the balance was $\$ 15.25$.
a. Write an equation in slope-intercept form that represents the amount in dollars remaining on the card as a function of songs downloaded.
b. Identify the slope of the line and tell what the slope represents.
c. Identify the $y$-intercept of the line and tell what it represents.
d. How many additional songs can Lora download when there is $\$ 15.25$ left on the card?

Graph the line with the given slope that contains the given point.
37. slope $=-3 ;(2,4)$
38. slope $=-\frac{1}{4} ;(0,0)$
39. slope $=\frac{1}{2} ;(-2,-1)$

Tell whether each statement is sometimes, always, or never true.
40. A line described by the equation $y=m x+b$ contains the point $(0, b)$.
41. The slope of the line that contains the points $(0,0)$ and $(c, d)$ is negative if both $c$ and $d$ are negative.
42. The $y$-intercept of the graph of $y-y_{1}=m\left(x-x_{1}\right)$ is negative if $y_{1}$ is negative.
43. Meteorology Snowfall accumulates at an average rate of 2.5 inches per hour during a snowstorm. Two hours after the snowstorm begins, the average depth of snow on the ground is 11 inches.
a. Write an equation in point-slope form that represents the depth of the snow in inches as a function of hours since the snowstorm began.
b. How much snow is on the ground when the snowstorm starts?
c. The snowstorm begins at 2:15 p.m. and continues until 6:30 P.M. How much snow is on the ground at the end of the storm?

Write an equation in point-slope form that describes each graph.
44.

45.

46.

The tables show linear relationships between $x$ and $y$. Copy and complete the tables.
47.

| $x$ | -2 | 0 |  | 7 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | -18 |  | 12 | 27 |

48. 

| $x$ | -4 | 1 | 0 |  |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | 14 | 4 |  | -6 |

49. //ERROR ANALYSIS/// Two students used point-slope form to find an equation that describes the line with slope -3 through $(-5,2)$. Who is incorrect? Explain the error.

(B)

$$
\begin{aligned}
& y-y_{1}=m\left(x-x_{1}\right) \\
& y-2=-3[x-(-5)] \\
& y-2=-3(x+5)
\end{aligned}
$$

50. Critical Thinking Compare the methods for finding the equation that describes a line when you know

- a point on the line and the slope of the line.
- two points on the line.

How are the methods alike? How are they different?
51. Write About It Explain why the first statement is false but the second is true.

- All linear equations can be written in point-slope form.
- All linear equations that describe functions can be written in point-slope form.

52. Multi-Step The table shows the mean scores on a standardized test for several different years.

| Years Since 1985 | 0 | 5 | 10 | 17 | 21 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Mean Combined Score | 994 | 1009 | 1001 | 1016 | 1020 |

a. Make a scatter plot of the data and add a trend line to your graph.
b. Use your trend line to estimate the slope and $y$-intercept, and write an equation in slope-intercept form.
c. What do the slope and $y$-intercept represent in this situation?
53. This problem will prepare you for the Multi-Step Test Prep on page 376.
a. Stephen is walking from his house to his friend Sharon's house. When he is 12 blocks away, he looks at his watch. He looks again when he is 8 blocks away and finds that 6 minutes have passed. Write two ordered pairs for these data in the form (time, blocks).
b. Write a linear equation for these two points.
c. What is the total amount of time it takes Stephen to reach Sharon's house? Explain how you found your answer.
54. Which equation describes the line through $(-5,1)$ with slope of 1 ?
(A) $y+1=x-5$
(C) $y-1=-5(x-1)$
(B) $y+5=x-1$
(D) $y-1=x+5$
55. A line contains $(4,4)$ and $(5,2)$. What are the slope and $y$-intercept?
(F) slope $=-2 ; y$-intercept $=2$
(H) slope $=-2 ; y$-intercept $=12$
(G) slope $=1.2 ; y$-intercept $=-2$
(J) slope $=12 ; y$-intercept $=1.2$

## CHALLENGE AND EXTEND

56. A linear function has the same $y$-intercept as $x+4 y=8$ and its graph contains the point $(2,7)$. Find the slope and $y$-intercept.
57. Write the equation of a line in slope-intercept form that contains $\left(\frac{3}{4}, \frac{1}{2}\right)$ and has the same slope as the line described by $y+3 x=6$.
58. Write the equation of a line in slope-intercept form that contains $\left(-\frac{1}{2},-\frac{1}{3}\right)$ and $\left(1 \frac{1}{2}, 1\right)$.

## SPIRAL REVIEW

Solve each compound inequality and graph the solutions. (Lesson 3-6)
59. $-4 \leq x+2 \leq 1$
60. $m-5>-7$ AND $m+1<2$
61. A group of hikers is walking the Appalachian Trail. The function $y=12 x$ describes how many miles $y$ the group has traveled in $x$ days. Graph the function. Then use the graph to estimate how many miles the group will hike in 18 days. (Lesson 4-4)

Write the equation that describes each line in slope-intercept form. (Lesson 5-7)
62. slope $=3, y$-intercept $=-5$
63. slope $=-2,(2,4)$ is on the line

## Career Path

Michael Raynor
Data mining major

Q: What math classes did you take in high school?
A: Algebra 1 and 2, Geometry, and Statistics

Q: What math classes have you taken in college?
A: Applied Statistics, Data Mining Methods, Web Mining, and Artificial Intelligence

Q: How do you use math?
A: Once for a class, I used software to analyze basketball statistics. What I learned helped me develop strategies for our school team.

Q: What are your future plans?
A: There are many options for people with data mining skills. I could work in banking, pharmaceuticals, or even the military. But my dream job is to develop game strategies for an NBA team.

## Graph Linear Functions

You can use a graphing calculator to quickly graph lines whose equations are in point-slope form. To enter an equation into your calculator, it must be solved for $y$, but it does not necessarily have to be in slope-intercept form.

## Use with Lesson 5-8

Graph the line with slope 2 that contains the point $(2,6.09)$.
(1) Use point-slope form.

$$
\begin{aligned}
y-y_{1} & =m\left(x-x_{1}\right) \\
y-6.09 & =2(x-2)
\end{aligned}
$$

(2) Solve for $y$ by adding 6.09 to both sides of the equation.
$y-6.09=2(x-2)$
$+6.09 \quad+6.09$
$y=2(x-2)+6.09$
(3) Enter this equation into your calculator.
$Y=2 \square(X, T, 0, n \square 2 \square)-109$ ENTER

Graph in the standard viewing window by pressing zoom and selecting 6:ZStandard. In this window, both the $x$ - and $y$-axes go from -10 to 10 .

(5) Notice that the scale on the $y$-axis is smaller than the scale on the $x$-axis. This is because the width of the calculator screen is about $50 \%$ greater than its height. To see a more accurate graph of this line, use the square viewing window. Press zoom and select 5:ZSquare.

## Try This

1. Graph the function represented by the line with slope -1.5 that contains the point $(2.25,-3)$. View the graph in the standard viewing window.
2. Now view the graph in the square viewing window. Press wnoow and write down the minimum and maximum values on the $x$ - and $y$-axes.
3. In which graph does the line appear steeper? Why?
4. Explain why it might sometimes be useful to look at a graph in a square window.

## Interpreting Trend Lines

In Chapter 4 you learned how to draw trend lines on scatter plots. Now you will learn how to find the equations of trend lines and write them in slopeintercept form.

## Example

Write an equation for the trend line on the scatter plot.
Two points on the trend line are $(30,75)$ and $(60,90)$.
To find the slope of the line that contains $(30,75)$ and ( 60,90 ), use the slope formula.

$$
\begin{aligned}
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}} & \text { Use the slope formula. } \\
m=\frac{90-75}{60-30} & \begin{aligned}
\text { Substitute }(30,75) \text { for }\left(x_{1}, y_{1}\right) \text { and } \\
(60,90) \text { for }\left(x_{2}, y_{2}\right) .
\end{aligned} \\
m=\frac{15}{30} & \text { Simplify. } \\
m=\frac{1}{2} &
\end{aligned}
$$

Use the slope and the point $(30,75)$ to find the $y$-intercept of the line.

$$
\begin{aligned}
y & =m x+b & & \text { Slope-intercept form } \\
75 & =\frac{1}{2}(30)+b & & \text { Substitute } \frac{1}{2} \text { for } m, 30 \text { for } x \text {, and } 75 \text { for } y . \\
75 & =15+b & & \text { Solve for } b . \\
60 & =b & &
\end{aligned}
$$

Write the equation.

$$
y=\frac{1}{2} x+60 \quad \text { Substitute } \frac{1}{2} \text { for } m \text { and } 60 \text { for } b .
$$

## Try This

1. In the example above, what is the meaning of the slope?
2. What does the $y$-intercept represent?
3. Use the equation to predict the test score of a student who spent 25 minutes studying.
4. Use the table to create a scatter plot. Draw a trend line and find the equation of your trend line. Tell the meaning of the slope and $y$-intercept. Then use your equation to predict the race time of a runner who ran 40 miles in training.

| Distance Run in Training (mi) | 12 | 15 | 16 | 18 | 21 | 23 | 24 | 25 | 33 |
| :---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Race Time (min) | 65 | 64 | 55 | 58 | 55 | 50 | 50 | 47 | 36 |

## 5-9

## Slopes of Parallel and Perpendicular Lines

## Objectives

 Identify and graph parallel and perpendicular lines.Write equations to describe lines parallel or perpendicular to a given line.

## Vocabulary

parallel lines perpendicular lines

## Why learn this?

Parallel lines and their equations can be used to model costs, such as the cost of a booth at a farmers' market.

To sell at a particular farmers' market for a year, there is a $\$ 100$ membership fee. Then you pay $\$ 3$ for each hour that you sell at the market. However, if you were a member the previous year, the membership fee is reduced to $\$ 50$.

- The red line shows the total cost if you are a new member.
- The blue line shows the total cost if you are a returning member.

These two lines are parallel. Parallel lines are lines in the same plane that have no points in common. In other words, they do not intersect.

## Parallel Lines

| WORDS | Two different nonvertical lines <br> are parallel if and only if they <br> have the same slope. | All different vertical lines <br> are parallel. |
| :--- | :--- | :--- |
| GRAPH |  |  |

## EXAMPLE

## 1 Identifying Parallel Lines

Identify which lines are parallel.
A. $y=\frac{4}{3} x+3 ; y=2 ; y=\frac{4}{3} x-5 ; y=-3$ The lines described by $y=\frac{4}{3} x+3$ and $y=\frac{4}{3} x-5$ both have slope $\frac{4}{3}$. These lines are parallel.The lines described by $y=2$ and $y=-3$ both have slope 0 . These lines are parallel.

## Identify which lines are parallel.

B $y=3 x+2 ; y=-\frac{1}{2} x+4 ; x+2 y=-4 ; y-5=3(x-1)$
Write all equations in slope-intercept form to determine the slopes.

| $y=3 x+2$ <br> slope-intercept form $\checkmark$ | $y=-\frac{1}{2} x+4$ <br> slope-intercept form $\checkmark$ |
| :--- | :--- |
| $x+2 y=-4$ | $y-5=3(x-1)$ |
| $\frac{-x}{2 y}=-x$ | $y-5=3 x-3$ <br> $\frac{-x}{2}=\frac{-x-4}{2}$ <br> $y=-\frac{1}{2} x-2$ |
| $y=3 x+2$ |  |

The lines described by $y=3 x+2$ and $y-5=3(x-1)$ have the same slope, but they are not parallel lines. They are the same line.
The lines described by $y=-\frac{1}{2} x+4$ and $x+2 y=-4$ represent parallel lines. They each have slope $-\frac{1}{2}$.

Identify which lines are parallel.
1a. $y=2 x+2 ; y=2 x+1 ; y=-4 ; x=1$
1b. $y=\frac{3}{4} x+8 ;-3 x+4 y=32 ; y=3 x ; y-1=3(x+2)$

## Remember!

In a parallelogram, opposite sides are parallel.

## Geometry Application

## Show that $A B C D$ is a parallelogram.

Use the ordered pairs and the slope formula to find the slopes of $\overline{A B}$ and $\overline{C D}$.

$$
\begin{aligned}
& \text { slope of } \overline{A B}=\frac{7-5}{4-(-1)}=\frac{2}{5} \\
& \text { slope of } \overline{C D}=\frac{3-1}{4-(-1)}=\frac{2}{5}
\end{aligned}
$$

$\overline{A B}$ is parallel to $\overline{C D}$ because they have the same slope.
$\overline{A D}$ is parallel to $\overline{B C}$ because they are both vertical.
Therefore, $A B C D$ is a parallelogram because both pairs of opposite sides are parallel.
2. Show that the points $A(0,2), B(4,2), C(1,-3)$, and $D(-3,-3)$ are the vertices of a parallelogram.

Perpendicular lines are lines that intersect to form right angles $\left(90^{\circ}\right)$.

| Note | WORDS | Two nonvertical lines are perpendicular if and only if the product of their slopes is -1 . | Vertical lines are perpendicular to horizontal lines. |
| :---: | :---: | :---: | :---: |
|  | GRAPH |  |     <br> $y=3$    |

## E X A M P LE 3 Identifying Perpendicular Lines

Identify which lines are perpendicular: $x=-2 ; y=1 ; y=-4 x$; $y+2=\frac{1}{4}(x+1)$.

The graph described by $x=-2$ is a vertical line, and the graph described by $y=1$ is a horizontal line. These lines are perpendicular.
The slope of the line described by $y=-4 x$ is -4 . The slope of the line described by $y+2=\frac{1}{4}(x-1)$ is $\frac{1}{4}$.

$$
(-4)\left(\frac{1}{4}\right)=-1
$$

These lines are perpendicular because the product of their slopes is -1 .

3. Identify which lines are perpendicular: $y=-4 ; y-6=5(x+4)$; $x=3 ; y=-\frac{1}{5} x+2$.

## E X A MPLE 4 Geometry Application

## Helpful Hint

A right triangle contains one right angle. In Example 4, $\angle P$ and $\angle R$ are clearly not right angles, so the only possibility is $\angle Q$.

Show that $P Q R$ is a right triangle.
If $P Q R$ is a right triangle, $\overline{P Q}$ will be perpendicular to $\overline{Q R}$.

$$
\begin{aligned}
& \text { slope of } \overline{P Q}=\frac{3-1}{3-0}=\frac{2}{3} \\
& \text { slope of } \overline{Q R}=\frac{3-0}{3-5}=\frac{3}{-2}=-\frac{3}{2}
\end{aligned}
$$

$\overline{P Q}$ is perpendicular to $\overline{Q R}$ because $\frac{2}{3}\left(-\frac{3}{2}\right)=-1$.
Therefore, $P Q R$ is a right triangle because it contains a right angle.
4. Show that $P(1,4), Q(2,6)$, and $R(7,1)$ are the vertices of a right triangle.

A Write an equation in slope-intercept form for the line that passes through $(4,5)$ and is parallel to the line described by $y=5 x+10$.

Step 1 Find the slope of the line.

$$
y=5 x+10
$$

$$
\text { The slope is } 5 \text {. }
$$

The parallel line also has a slope of 5.
Step 2 Write the equation in point-slope form.

$$
\begin{aligned}
y-y_{1} & =m\left(x-x_{1}\right) & & \text { Use point-slope form. } \\
y-5 & =5(x-4) & & \text { Substitute } 5 \text { for } m, 4 \text { for } x_{1}, \text { and } 5 \text { for } y_{1}
\end{aligned}
$$

Step 3 Write the equation in slope-intercept form.

$$
y-5=5(x-4)
$$

$$
y-5=5 x-20 \quad \text { Distributive Property }
$$

$$
y=5 x-15 \quad \text { Addition Property of Equality }
$$

B Write an equation in slope-intercept form for the line that passes through $(3,2)$ and is perpendicular to the line described by $y=3 x-1$.
Step 1 Find the slope of the line.

$$
y=3 x-1 \quad \text { The slope is } 3 .
$$

The perpendicular line has a slope of $-\frac{1}{3}$, because $3\left(-\frac{1}{3}\right)=-1$.
Step 2 Write the equation in point-slope form.

$$
\begin{array}{ll}
y-y_{1}=m\left(x-x_{1}\right) & \text { Use point-slope form. } \\
y-2=-\frac{1}{3}(x-3) & \text { Substitute }-\frac{1}{3} \text { for } m, 3 \text { for } x_{1}, \text { and } 2 \text { for } y_{1}
\end{array}
$$

Step 3 Write the equation in slope-intercept form.

$$
\begin{aligned}
y-2 & =-\frac{1}{3}(x-3) & & \\
y-2 & =-\frac{1}{3} x+1 & & \text { Distributive Property } \\
y & =-\frac{1}{3} x+3 & & \text { Addition Property of Equality }
\end{aligned}
$$

5a. Write an equation in slope-intercept form for the line that passes through $(5,7)$ and is parallel to the line described by $y=\frac{4}{5} x-6$.
5b. Write an equation in slope-intercept form for the line that passes through $(-5,3)$ and is perpendicular to the line described by $y=5 x$.

## THINK AND DISCUSS

1. Are the lines described by $y=\frac{1}{2} x$ and $y=2 x$ perpendicular? Explain.
2. Describe the slopes and $y$-intercepts when two nonvertical lines are parallel.
3. GET ORGANIZED Copy and complete the graphic organizer. In each box, sketch
 an example and describe the slopes.

## GUIDED PRACTICE

1. Vocabulary _ ? lines have the same slope. (Parallel or Perpendicular)

SEE EXAMPLE 1
p. 361

Identify which lines are parallel.
2. $y=6 ; y=6 x+5 ; y=6 x-7 ; y=-8$
3. $y=\frac{3}{4} x-1 ; y=-2 x ; y-3=\frac{3}{4}(x-5) ; y-4=-2(x+2)$

SEE EXAMPLE 2
p. 362

SEE EXAMPLE 3
p. 363

SEE EXAMPLE 4
p. $363 \quad \square$

SEE EXAMPLE 5
p. 364
4. Geometry Show that $A B C D$ is a trapezoid.
(Hint: In a trapezoid, exactly one pair of opposite sides is parallel.)

## Identify which lines are perpendicular.

5. $y=\frac{2}{3} x-4 ; y=-\frac{3}{2} x+2 ; y=-1 ; x=3$
6. $y=-\frac{3}{7} x-4 ; y-4=-7(x+2)$;

$y-1=\frac{1}{7}(x-4) ; y-7=\frac{7}{3}(x-3)$
7. Geometry Show that $P Q R S$ is a rectangle. (Hint: In a rectangle, all four angles are right angles.)
8. Write an equation in slope-intercept form for the line that passes through $(5,0)$ and is perpendicular to the line described by $y=-\frac{5}{2} x+6$.

## PRACTICE AND PROBLEM SOLVING

Extra Practice skills Practice p. S13 Application Practice p. S32

Identify which lines are parallel.
9. $x=7 ; y=-\frac{5}{6} x+8 ; y=-\frac{5}{6} x-4 ; x=-9$
10. $y=-x ; y-3=-1(x+9) ; y-6=\frac{1}{2}(x-14) ; y+1=\frac{1}{2} x$
11. $y=-3 x+2 ; y=\frac{1}{2} x-1 ;-x+2 y=17 ; 3 x+y=27$
12. Geometry Show that $L M N P$ is a parallelogram.

Identify which lines are perpendicular.
13. $y=6 x ; y=\frac{1}{6} x ; y=-\frac{1}{6} x ; y=-6 x$
14. $y-9=3(x+1) ; y=-\frac{1}{3} x+5 ; y=0 ; x=6$

15. $x-6 y=15 ; y=3 x-2 ; y=-3 x-3 ; y=-6 x-8 ; 3 y=-x-11$
16. Geometry Show that $A B C$ is a right triangle.
17. Write an equation in slope-intercept form for the line that passes through $(0,0)$ and is parallel to the line described by $y=-\frac{6}{7} x+1$.

Without graphing, tell whether each pair of lines is parallel, perpendicular, or neither.

18. $x=2$ and $y=-5$
19. $y=7 x$ and $y-28=7(x-4)$
20. $y=2 x-1$ and $y=\frac{1}{2} x+2$
21. $y-3=\frac{1}{4}(x-3)$ and $y+13=\frac{1}{4}(x+1)$

Write an equation in slope-intercept form for the line that is parallel to the given line and that passes through the given point.
22. $y=3 x-7 ;(0,4)$
23. $y=\frac{1}{2} x+5$; $(4,-3)$
24. $4 y=x ;(4,0)$
25. $y=2 x+3 ;(1,7)$
26. $5 x-2 y=10$; $(3,-5)$
27. $y=3 x-4 ;(-2,7)$
28. $y=7 ;(2,4)$
29. $x+y=1 ;(2,3)$
30. $2 x+3 y=7$; $(4,5)$
31. $y=4 x+2 ;(5,-3)$
32. $y=\frac{1}{2} x-1 ;(0,-4)$
33. $3 x+4 y=8 ;(4,-3)$

Write an equation in slope-intercept form for the line that is perpendicular to the given line and that passes through the given point.
34. $y=-3 x+4 ;(6,-2)$
35. $y=x-6$; $(-1,2)$
36. $3 x-4 y=8$; $(-6,5)$
37. $5 x+2 y=10 ;(3,-5)$
38. $y=5-3 x$; $(2,-4)$
39. $-10 x+2 y=8 ;(4,-3)$
40. $2 x+3 y=7 ;(4,5)$
41. $4 x-2 y=-6 ;(3,-2)$
42. $-2 x-8 y=16 ;(4,5)$
43. $y=-2 x+4 ;(-2,5)$
44. $y=x-5 ;(0,5)$
45. $x+y=2$; $(8,5)$
46. Write an equation describing the line that is parallel to the $y$-axis and that is 6 units to the right of the $y$-axis.
47. Write an equation describing the line that is perpendicular to the $y$-axis and that is 4 units below the $x$-axis.
48. Critical Thinking Is it possible for two linear functions whose graphs are parallel lines to have the same $y$-intercept? Explain.
49. Estimation Estimate the slope of a line that is perpendicular to the line through $(2.07,8.95)$ and ( $-1.9,25.07$ ).
50. Write About It Explain in words how to write an equation in slope-intercept form that describes a line parallel to $y-3=-6(x-3)$.

## Multi-Step

 Test Prep51. This problem will prepare you for the Multi-Step Test Prep on page 376.
a. Flora walks from her home to the bus stop at a rate of 50 steps per minute. Write a rule that gives her distance from home (in steps) as a function of time.
b. Flora's neighbor Dan lives 30 steps closer to the bus stop. He begins walking at the same time and at the same pace as Flora. Write a rule that gives Dan's distance from Flora's house as a function of time.
c. Will Flora meet Dan along the walk? Use a graph to help explain your answer.
52. Which describes a line parallel to the line described by $y=-3 x+2$ ?
(A) $y=-3 x$
(B) $y=\frac{1}{3} x$
(C) $y=2-3 x$
(D) $y=\frac{1}{3} x+2$
53. Which describes a line passing through $(3,3)$ that is perpendicular to the line described by $y=\frac{3}{5} x+2$ ?
(F)

(G) $y=\frac{5}{3} x-2$
(H)

(I) $y=\frac{3}{5} x+\frac{6}{5}$
54. Gridded Response The graph of a linear function $f(x)$ is parallel to the line described by $2 x+y=5$ and contains the point $(6,-2)$. What is the $y$-intercept of $f(x)$ ?

## CHALLENGE AND EXTEND

55. Three or more points that lie on the same line are called collinear points. Explain why the points $A, B$, and $C$ must be collinear if the line containing $A$ and $B$ has the same slope as the line containing $B$ and $C$.
56. The lines described by $y=(a+12) x+3$ and $y=4 a x$ are parallel. What is the value of $a$ ?
57. The lines described by $y=(5 a+3) x$ and $y=-\frac{1}{2} x$ are perpendicular. What is the value of $a$ ?
58. Geometry The diagram shows a square in the coordinate plane. Use the diagram to show that the diagonals of a square are perpendicular.

## SPIRAL REVIEW

59. The record high temperature for a given city is $112^{\circ} \mathrm{F}$. The morning temperature today was $94^{\circ} \mathrm{F}$ and the temperature will increase $t$ degrees. Write and solve an inequality to find all values of $t$ that would break the record for the high temperature. (Lesson 3-2)

Graph each function. (Lesson 4-4)
60. $y=-3 x+5$
61. $y=x-1$
62. $y=x^{2}-3$

Write an equation in slope-intercept form for the line with the given slope that contains the given point. (Lesson 5-8)
63. slope $=\frac{2}{3} ;(6,-1)$
64. slope $=-5 ;(2,4)$
65. slope $=-\frac{1}{2} ;(-1,0)$
66. slope $=-\frac{1}{3} ;(2,7)$
67. slope $=0 ;(-3,3)$
68. slope $=\frac{1}{5} ;(-4,-2)$

## The Family of Linear Functions

A family of functions is a set of functions whose graphs have basic characteristics in common. For example, all linear functions form a family. You can use a graphing calculator to explore families of functions.

Graph the lines described by $y=x-2, y=x-1, y=x, y=x+1, y=x+2, y=x+3$, and $y=x+4$. How does the value of $b$ affect the graph described by $y=x+b$ ?
(1) All of the functions are in the form $y=x+b$. Enter them into the $\mathbf{Y}=$ editor.

and so on.

(2) Press zoom and select 6:Zstandard.

Think about the different values of $b$ as you watch the graphs being drawn. Notice that the lines are all parallel.
(3) It appears that the value of $b$ in $y=x+b$ shifts the graph up or down-up if $b$ is positive and down if $b$ is negative.

## Try This

1. Make a prediction about the lines described by $y=2 x-3, y=2 x-2, y=2 x-1, y=2 x$, $y=2 x+1, y=2 x+2$, and $y=2 x+3$. Then graph. Was your prediction correct?
2. Now use your calculator to explore what happens to the graph of $y=m x$ when you change the value of $m$.
a. Make a Prediction How do you think the lines described by $y=-2 x, y=-x$, $y=x$, and $y=2 x$ will be related? How will they be alike? How will they be different?
b. Graph the functions given in part $\mathbf{a}$. Was your prediction correct?
c. How is the effect of $m$ different when $m$ is positive from when $m$ is negative?

## 5-10

## Objective

Describe how changing slope and $y$-intercept affect the graph of a linear function.

## Vocabulary

 family of functions parent function transformation translation rotation reflection
## Remember!

Function notation$f(x), g(x)$, and so on-can be used in place of $y$.
$y=f(x)$

## Transforming Linear Functions

## Who uses this?

Business owners can use transformations to show the effects of price changes, such as the price of trophy engraving. (See Example 5.)

A family of functions is a set of functions whose graphs have basic characteristics in common. For example, all linear functions form a family because all of their graphs are the same basic shape.

A parent function is the most basic function in a family. For linear functions, the parent function is $f(x)=x$.

The graphs of all other linear functions are transformations of the graph of the parent function, $f(x)=x$. A transformation is a change in position or size of a figure.

There are three types of transformations-translations, rotations, and reflections.

Look at the four functions and their graphs below.

Notice that all of the lines above are parallel. The slopes are the same but the $y$-intercepts are different.

The graphs of $g(x)=x+3, h(x)=x-2$, and $k(x)=x-4$ are vertical translations of the graph of the parent function, $f(x)=x$. A translation is a type of transformation that moves every point the same distance in the same direction. You can think of a translation as a "slide."

## Vertical Translation of a Linear Function

When the $y$-intercept $b$ is changed in the function $f(x)=m x+b$, the graph is translated vertically.

- If $b$ increases, the graph is translated up.
- If $b$ decreases, the graph is translated down.

Translating Linear Functions
Graph $f(x)=x$ and $g(x)=x-5$. Then describe the transformation from the graph of $f(x)$ to the graph of $g(x)$.

The graph of $g(x)=x-5$ is the result of translating the graph of $f(x)=x 5$ units down.

CHECK it ourt

1. Graph $f(x)=x+4$ and $g(x)=x-2$. Then describe the transformation from the graph of $f(x)$ to the graph of $g(x)$.

The graphs of $g(x)=3 x, h(x)=5 x$, and $k(x)=\frac{1}{2} x$ are rotations of the graph of $f(x)=x$. A rotation is a transformation about a point. You can think of a rotation as a "turn." The $y$-intercepts are the same, but the slopes are different.

## Rotation of a Linear Function

When the slope $m$ is changed in the function $f(x)=m x+b$ it causes a rotation of the graph about the point $(0, b)$, which changes the line's steepness.

## EXAMPLE 2 Rotating Linear Functions

Graph $f(x)=x+2$ and $g(x)=2 x+2$. Then describe the transformation from the graph of $f(x)$ to the graph of $g(x)$.

The graph of $g(x)=2 x+2$ is the result of rotating the graph of $f(x)=x+2$ about $(0,2)$. The graph of $g(x)$ is steeper than the graph of $f(x)$.
2. Graph $f(x)=3 x-1$ and $g(x)=\frac{1}{2} x-1$. Then describe the transformation from the graph of $f(x)$ to the graph of $g(x)$.

The diagram shows the reflection of the graph of $f(x)=2 x$ across the $y$-axis, producing the graph of $g(x)=-2 x$. A reflection is a transformation across a line that produces a mirror image. You can think of a reflection as a "flip" over a line.

## Reflection of a Linear Function

When the slope $m$ is multiplied by -1 in $f(x)=m x+b$, the graph is reflected across the $y$-axis.

## E X A M PLE 3 Reflecting Linear Functions <br> A $f(x)=x$

Graph $f(x)$. Then reflect the graph of $f(x)$ across the $y$-axis. Write a function $g(x)$ to describe the new graph.

To find $g(x)$, multiply the value of $m$ by -1 .
$\operatorname{In} f(x)=x, m=1$.
$1(-1)=-1 \quad$ This is the value of $m$ for $g(x)$.
$g(x)=-x$
B $f(x)=-4 x-1$

To find $g(x)$, multiply the value of $m$ by -1 .

$$
\begin{aligned}
& \text { In } f(x)=-4 x-1, m=-4 \\
& \begin{array}{ll}
-4(-1)=4 \\
g(x)=4 x-1 & \text { This is the value of } m \text { for } g(x)
\end{array}
\end{aligned}
$$

3. Graph $f(x)=\frac{2}{3} x+2$. Then reflect the graph of $f(x)$ across the $y$ axis. Write a function $g(x)$ to describe the new graph.

## E X A M P LE 4 Multiple Transformations of Linear Functions

Graph $f(x)=x$ and $g(x)=3 x+1$. Then describe the transformations from the graph of $f(x)$ to the graph of $g(x)$.

Find transformations of $f(x)=x$ that will result in $g(x)=3 x+1$ :

- Multiply $f(x)$ by 3 to get $h(x)=3 x$. This rotates the graph about $(0,0)$ and makes it steeper.
- Then add 1 to $h(x)$ to get $g(x)=3 x+1$. This translates the graph 1 unit up.

The transformations are a rotation and a translation.
4. Graph $f(x)=x$ and $g(x)=-x+2$. Then describe the transformations from the graph of $f(x)$ to the graph of $g(x)$.

## E X A MPLE 5 Business Application

A trophy company charges $\$ 175$ for a trophy plus $\$ 0.20$ per letter for the engraving. The total charge for a trophy with $x$ letters is given by the function $f(x)=0.20 x+175$. How will the graph change if the trophy's cost is lowered to $\$ 172$ ? if the charge per letter is raised to $\$ 0.50$ ?

$f(x)=0.20 x+175$ is graphed in blue.
Letters
If the trophy's cost is lowered to $\$ 172$,
the new function is $g(x)=0.20 x+172$.
The original graph will be translated 3 units down.
If the charge per letter is raised to $\$ 0.50$, the new function is $h(x)=0.50 x+175$. The original graph will be rotated about $(0,175)$ and become steeper.

5. What if...? How will the graph change if the charge per letter is lowered to $\$ 0.15$ ? if the trophy's cost is raised to $\$ 180$ ?

## THINK AND DISCUSS

1. Describe the graph of $f(x)=x+3.45$
2. Look at the graphs in Example 5. For each line, is every point on the line a solution in this situation? Explain.

3. GET ORGANIZED Copy and complete the graphic organizer. In each box, sketch a graph of the given transformation of $f(x)=x$,
 and label it with a possible equation.

## GUIDED PRACTICE

Vocabulary Apply the vocabulary from this lesson to answer each question.

1. Changing the value of $b$ in $f(x)=m x+b$ results in a $\qquad$ ? of the graph. (translation or reflection)
2. Changing the value of $m$ in $f(x)=m x+b$ results in a $\qquad$ of the graph. (translation or rotation)

Graph $f(x)$ and $g(x)$. Then describe the transformation from the graph of $f(x)$ to the graph of $g(x)$.
SEE EXAMPLE
3. $f(x)=x, g(x)=x-4$
4. $f(x)=x, g(x)=x+1$
5. $f(x)=x, g(x)=x+2$
6. $f(x)=x, g(x)=x-6.5$

SEE EXAMPLE 2
p. 370 $\square$
7. $f(x)=x, g(x)=\frac{1}{4} x$
8. $f(x)=\frac{1}{5} x+3, g(x)=x+3$
9. $f(x)=2 x-2, g(x)=4 x-2$
10. $f(x)=x+1, g(x)=\frac{1}{2} x+1$

Graph $f(x)$. Then reflect the graph of $f(x)$ across the $y$-axis. Write a function $g(x)$ to describe the new graph.

SEE EXAMPLE 3
p. 371

SEE EXAMPLE 5
p. 372
11. $f(x)=-\frac{1}{5} x$
12. $f(x)=2 x+4$
13. $f(x)=\frac{1}{3} x-6$
14. $f(x)=5 x-1$

Graph $f(x)$ and $g(x)$. Then describe the transformations from the graph of $f(x)$ to the graph of $g(x)$.

15. $f(x)=x, g(x)=2 x-2$
17. $f(x)=-x-1, g(x)=-4 x$
16. $f(x)=x, g(x)=\frac{1}{3} x+1$
18. $f(x)=-x, g(x)=-\frac{1}{2} x-3$
19. Entertainment For large parties, a restaurant charges a reservation fee of $\$ 25$, plus $\$ 15$ per person. The total charge for a party of $x$ people is $f(x)=15 x+25$. How will the graph of this function change if the reservation fee is raised to $\$ 50$ ? if the perperson charge is lowered to $\$ 12$ ?

## PRACTICE AND PROBLEM SOLVING

| Independent Practice |  |
| :---: | :---: |
| For <br> Exercises | See <br> Example |
| $20-21$ | 1 |
| $22-23$ | 2 |

| 28 | 5 |

## Extra Practice

Skills Practice p. S13
Application Practice p. S32

Graph $f(x)$ and $g(x)$. Then describe the transformation(s) from the graph of $f(x)$ to the graph of $g(x)$.
20. $f(x)=x, g(x)=x+\frac{1}{2}$
21. $f(x)=x, g(x)=x-4$
22. $f(x)=\frac{1}{5} x-1, g(x)=\frac{1}{10} x-1$
23. $f(x)=x+2, g(x)=\frac{2}{3} x+2$

Graph $f(x)$. Then reflect the graph of $f(x)$ across the $y$-axis. Write a function $g(x)$ to describe the new graph.
24. $f(x)=6 x$
25. $f(x)=-3 x-2$

Graph $f(x)$ and $g(x)$. Then describe the transformations from the graph of $f(x)$ to the graph of $g(x)$.
26. $f(x)=2 x, g(x)=4 x-1$
27. $f(x)=-7 x+5, g(x)=-14 x$
28. School The number of chaperones on a field trip must include 1 teacher for every 4 students, plus 2 parents total. The function describing the number of chaperones for a trip of $x$ students is $f(x)=\frac{1}{4} x+2$. How will the graph change if the number of parents is reduced to 0 ? if the number of teachers is raised to 1 for every 3 students?

Describe the transformation(s) on the graph of $f(x)=x$ that result in the graph of $g(x)$. Graph $f(x)$ and $g(x)$, and compare the slopes and intercepts.
29. $g(x)=-x$
30. $g(x)=x+8$
31. $g(x)=3 x$
32. $g(x)=-\frac{2}{7} x$
33. $g(x)=6 x-3$
34. $g(x)=-2 x+1$

Sketch the transformed graph. Then write a function to describe your graph.
35. Rotate the graph of $f(x)=-x+2$ until it has the same steepness in the opposite direction.
36. Reflect the graph of $f(x)=x-1$ across the $y$-axis, and then translate it 4 units down.
37. Translate the graph of $f(x)=\frac{1}{6} x-10$ six units up.
38. Hobbies A book club charges a membership fee of $\$ 20$ and then $\$ 12$ for each book purchased.
a. Write and graph a function to represent the cost $y$ of membership in the club based on the number of books purchased $x$.
b. What if...? Write and graph a second function to represent the cost of membership if the club raises its membership fee to $\$ 30$.
c. Describe the relationship between your graphs from parts $\mathbf{a}$ and $\mathbf{b}$.

Describe the transformation(s) on the graph of $f(x)=x$ that result in the graph of $g(x)$.
39. $g(x)=x-9$
40. $g(x)=-x$
41. $g(x)=5 x$
42. $g(x)=-\frac{2}{3} x+1$
43. $g(x)=-2 x$
44. $g(x)=\frac{1}{5} x$
45. Careers Kelly works as a salesperson. She earns a weekly base salary plus a commission that is a percent of her total sales. Her total weekly pay is described by $f(x)=0.20 x+300$, where $x$ is total sales in dollars.
a. What is Kelly's weekly base salary?
b. What percent of total sales does Kelly receive as commission?
c. What if...? What is the change in Kelly's salary plan if the weekly pay function changes to $g(x)=0.25 x+300$ ? to $h(x)=0.2 x+400$ ?
46. Critical Thinking To transform the graph of $f(x)=x$ into the graph of $g(x)=-x$, you can reflect the graph of $f(x)$ across the $y$-axis. Find another transformation that will have the same result.
47. Write About It Describe how a reflection across the $y$-axis affects each point on a graph. Give an example to illustrate your answer.
48. This problem will prepare you for the Multi-Step Test Prep on page 376.
a. Maria is walking from school to the softball field at a rate of 3 feet per second. Write a rule that gives her distance from school (in feet) as a function of time (in seconds). Then graph.
b. Give a real-world situation that could be described by a line parallel to the one in part $\mathbf{a}$.
c. What does the $y$-intercept represent in each of these situations?
49. Which best describes the effect on $f(x)=2 x-5$ if the slope changes to 10 ?
(A) Its graph becomes less steep.
(B) Its graph moves 15 units up.
(C) Its graph makes 10 complete rotations.
(D) The $x$-intercept becomes $\frac{1}{2}$.
50. Given $f(x)=22 x-182$, which does NOT describe the effect of increasing the $y$-intercept by 182 ?
(F) The new line passes through the origin.
(G) The new $x$-intercept is 0 .
(H) The new line is parallel to the original.
(J) The new line is steeper than the original.

## CHALLENGE AND EXTEND

51. You have seen that the graph of $g(x)=x+3$ is the result of translating the graph of $f(x)=x$ three units up. However, you can also think of this as a horizontal translation-that is, a translation left or right. Graph $g(x)=x+3$. Describe the horizontal translation of the graph of $f(x)=x$ to get the graph of $g(x)=x+3$.
52. If $c>0$, how can you describe the translation that transforms the graph of $f(x)=x$ into the graph of $g(x)=x+c$ as a horizontal translation? $g(x)=x-c$ as a horizontal translation?

## SPIRAL REVIEW

Give an expression in simplest form for the perimeter of each figure. (Lesson 1-7)
53.

54.

Identify the correlation you would expect to see between each pair of data sets. Explain. (Lesson 4-5)
55. the temperature and the number of people at the local ice cream parlor
56. the amount of electricity used and the total electric bill
57. the number of miles driven after a fill-up and the amount of gasoline in the tank

Identify which lines are parallel. (Lesson 5-9)
58. $y=-2 x+3 ; y=2 x ; y=-2 ; y=-2 x-4 ; y=\frac{1}{2} x ; y-1=-\frac{1}{2}(x+6)$
59. $y=\frac{3}{5} x+8 ; y=-\frac{3}{5} x ; y+1=-\frac{3}{5}(x-2) ; y=\frac{5}{3} x+9 ; y=3 x+5$

Identify which lines are perpendicular. (Lesson 5-9)
60. $3 x-5 y=5 ; 5 y=-2 x-15 ; y=3 x+5 ; 5 x+3 y=-21 ; y=\frac{5}{2} x-2$
61. $x=4 ; 2 y+x=6 ; 3 x-y=12 ; y=2 x+3 ; y=-3$

SECTION 5B

## Using Linear Functions

Take a Walk! All intersections in Durango, Colorado, have crossing signals with timers. Once the signal changes to walk, the timer begins at 28 seconds and counts down to show how much time pedestrians have to cross the street.

1. Pauline counted her steps as she crossed the street. She counted 15 steps with 19 seconds remaining. When she reached the opposite side of the street, she had counted a total of 30 steps and had 10 seconds remaining. Copy and complete the table below using these values.

| Time <br> Remaining (s) | 28 | $\square$ | $\square$ |
| :--- | :---: | :--- | :--- |
| Steps | 0 |  | $\square$ |

2. Find the average rate of change for Pauline's walk.
3. Sketch a graph of the points in the table, or plot them on your graphing calculator.
4. Find an equation that describes the line through the points.
5. How would the graph change if Pauline increased her speed? What if she decreased her speed?

## Quiz for Lessons 5-7 Through 5-10

## 5-7 Slope-Intercept Form

Graph each line given the slope and $y$-intercept.

1. slope $=\frac{1}{4} ; y$-intercept $=2$
2. slope $=-3 ; y$-intercept $=5$
3. slope $=-1 ; y$-intercept $=-6$

Write each equation in slope-intercept form. Then graph the line described by the equation.
4. $2 x+y=5$
5. $2 x-6 y=6$
6. $3 x+y=3 x-4$
7. Entertainment At a chili cook-off, people pay a $\$ 3.00$ entrance fee and $\$ 0.50$ for each bowl of chili they taste. The graph shows the total cost per person as a function of the number of bowls of chili tasted.
a. Write an equation that represents the total cost per person as a function of the number of bowls of chili tasted.
b. Identify the slope and $y$-intercept and describe their meanings.

## 5-8 Point-Slope Form

Graph the line with the given slope that contains the given point.
8. slope $=-3 ;(0,3)$
9. slope $=-\frac{2}{3} ;(-3,5)$
10. slope $=2 ;(-3,-1)$

Write an equation in slope-intercept form for the line through the two points.
11. $(3,1)$ and $(4,3)$
12. $(-1,-1)$ and $(1,7)$
13. $(1,-4)$ and $(-2,5)$

## 5-9 Slopes of Parallel and Perpendicular Lines

Identify which lines are parallel.
14. $y=-2 x ; y=2 x+1 ; y=2 x ; y=2(x+5)$
15. $-3 y=x ; y=-\frac{1}{3} x+1 ; y=-3 x ; y+2=x+4$

Identify which lines are perpendicular.
16. $y=-4 x-1 ; y=\frac{1}{4} x ; y=4 x-6 ; x=-4$
17. $y=-\frac{3}{4} x ; y=\frac{3}{4} x-3 ; y=\frac{4}{3} x ; y=4 ; x=3$
18. Write an equation in slope-intercept form for the line that passes through $(5,2)$ and is parallel to the line described by $3 x-5 y=15$.
19. Write an equation in slope-intercept form for the line that passes through $(3,5)$ and is perpendicular to the line described by $y=-\frac{3}{2} x-2$.

## 5-10 Transforming Linear Functions

Graph $f(x)$ and $g(x)$. Then describe the transformation(s) from the graph of $f(x)$ to the graph of $g(x)$.
20. $f(x)=5 x, g(x)=-5 x$
21. $f(x)=\frac{1}{2} x-1, g(x)=\frac{1}{2} x+4$
22. An attorney charges an initial fee of $\$ 250$ and then $\$ 150$ per hour. The total bill after $x$ hours is $f(x)=150 x+250$. How will the graph of this function change if the initial fee is reduced to $\$ 200$ ? if the hourly rate is increased to $\$ 175$ ?

## Exilision Absolute-Value Functions

## Objectives

Graph absolute-value functions.

Identify characteristics of absolute-value functions and their graphs.

## Vocabulary

absolute-value function axis of symmetry vertex

An absolute-value function is a function whose rule contains an absolute-value expression. To graph an absolute-value function, choose several values of $x$ and generate some ordered pairs.

| $x$ | $f(x)=\|x\|$ |
| ---: | :---: |
| -2 | 2 |
| -1 | 1 |
| 0 | 0 |
| 1 | 1 |
| 2 | 2 |

Absolute-value graphs are composed of two linear pieces. The axis of symmetry is the line that divides the graph into two congruent halves. The vertex is the "corner" point on the graph.

From the table and the graph of $f(x)=|x|$, you can tell that

- the axis of symmetry is the $y$-axis $(x=0)$.
- the vertex is $(0,0)$.
- the domain ( $x$-values) is the set of all real numbers.
- the range ( $y$-values) is described by $y \geq 0$.
- the $x$-intercept and the $y$-intercept are both 0 .
- the slope of the left linear piece is -1 and the slope of the right linear piece is 1 .

## E X A M P L E

Absolute-Value Functions
Graph $f(x)=|2 x|-1$ and label the axis of symmetry and the vertex. Identify the intercepts, give the domain and range, and find the slope of each piece.

Choose positive, negative, and zero values for $x$, and find ordered pairs.

| $x$ | -2 | -1 | 0 | 1 | 2 |
| :--- | ---: | ---: | ---: | ---: | ---: |
| $f(x)=\|2 x\|-1$ | 3 | 1 | -1 | 1 | 3 |

Plot the ordered pairs and connect them.
From the table and the graph, you can tell that

- the axis of symmetry is the $y$-axis $(x=0)$.

- the vertex is $(0,-1)$.
- the $x$-intercepts are $\frac{1}{2}$ and $-\frac{1}{2}$.
- the $y$-intercept is -1 .
- the domain is all real numbers.
- the range is described by $y \geq-1$.
- the slope of the left piece is -2 and the slope of the right piece is 2 .

1. Graph $f(x)=3|x|$ and label the axis of symmetry and the vertex. Identify the intercepts, give the domain and range, and find the slope of each piece.

The parent function for absolute-value functions is $f(x)=|x|$. The graphs of all other absolute-value functions are transformations of the graph of $f(x)=|x|$.

## For $f(x)=a|x-b|+c$

| WORDS | EXAMPLES | WORDS | EXAMPLES |
| :---: | :---: | :---: | :---: |
| Opening Direction <br> - If $a>0$, the graph opens upward. <br> - If $a<0$, the graph opens downward. |  | Horizontal <br> Translation <br> - If $b>0$, the graph is translated $b$ units right from $f(x)=\|x\|$. <br> - If $b<0$, the graph is translated $b$ units left from $f(x)=\|x\|$. | $h(x)=\|x+2\|$  |
| Width <br> - If $\|a\|>1$, the graph is narrower than the graph of $f(x)=\|x\|$. <br> - If $\|a\|<1$, the graph is wider than the graph of $f(x)=\|x\|$. <br> The slopes of the two linear pieces are a and $-a$. |  | Vertical <br> Translation <br> - If $c>0$, the graph is translated c units up from $f(x)=\|x\|$. <br> - If $c<0$, the graph is translated c units down from $f(x)=\|x\|$. |  |

## EXAMPLE 2 Transforming Absolute-Value Functions

Describe the transformations from the graph of $f(x)=|x|$ to the graph of $g(x)$. Then graph both functions.
A $g(x)=2|x+1|$
Identify $a, b$, and $c$.

$$
g(x)=2|x+1|=2|x-(-1)|+0
$$

- $a=2$ : graph is narrower
- $b=-1$ : translated 1 unit left
- $c=0$ : no vertical translation

Describe the transformations from the graph of $f(x)=|x|$ to the graph of $g(x)$. Then graph both functions.
B $g(x)=-|x-3|+2$
Identify $a, b$, and $c$.

$$
g(x)=-|x-3|+2=-1|x-3|+2
$$

- $a=-1$ : graph opens downward and width is unchanged
- $b=3$ : translated 3 units right

- $c=2$ : translated 2 units up

CHECK
IT OUT!

Describe the transformations from the graph of $f(x)=|x|$ to the graph of $g(x)$. Then graph both functions.
2a. $g(x)=|x-4|-2$
2b. $g(x)=\frac{1}{3}|x|+1$

Minimum and Maximum Values of Absolute-Value Functions

## EXAMPLE 3 Identifying the Minimum or Maximum

Graph $f(x)=|x+3|-5$. Identify the vertex and give the minimum or maximum value of the function.

The vertex is $(-3,-5)$.
The graph opens upward, so the function has a minimum.
The minimum is -5 .

Graph each absolute-value function. Identify the vertex and give the minimum or maximum value of the function.
3a. $f(x)=-|x|+5$
3b. $f(x)=|x+1|-6$

In a charity race, a water stand for the runners is halfway between the start and finish lines. The function $y=\left|\frac{x}{8}-3\right|$ models Riley's distance $y$ in miles from the water stand $x$ minutes into the race.
A How long is the race?
$y=\left|\frac{x}{8}-3\right|$ is graphed in blue.
At the start of the race ( $x=0$ ), Riley is 3 mi from the water stand. The water stand is halfway between the start and finish lines, so the race is 6 mi .

Distance From Water Stand

B How much time does it take Riley to reach the water stand?
When Riley reaches the water stand, $y=0$. This happens when $x=24$. It takes Riley 24 min to reach the water stand.

C The function $y=\left|\frac{x}{10}-3\right|$ models Dean's distance from the water stand during the same race. Compare Dean's graph to Riley's graph. What can you conclude about Dean's speed?
$y=\left|\frac{x}{10}-3\right|$ is graphed in red. Both graphs start at the same point, but Dean's graph is translated to the right. It takes him more time to reach the water stand and to finish the race. Therefore, he is running more slowly than Riley.
4. How would the graph be different for someone who runs faster than Riley?

## EXTENSION

## Exercises

Graph each absolute-value function and label the axis of symmetry and the vertex. Identify the intercepts, give the domain and range, and find the slope of each piece. Identify the maximum or minimum.

1. $f(x)=|x|+3$
2. $f(x)=|x+3|$
3. $f(x)=\frac{1}{2}|x|$
4. $f(x)=|x-3|$

Tell whether each statement is sometimes, always, or never true.
5. The absolute value of a number is negative.
6. An absolute-value function has an $x$-intercept.
7. An absolute-value function has two $y$-intercepts.

Write a function to describe each of the following.
8. The graph of $f(x)=|x|$ is translated 2 units right.
9. The graph of $f(x)=|x|$ is narrowed and reflected across the $x$-axis.
10. Critical Thinking Suppose that an absolute-value function has no $x$-intercepts. What can you say about the function rule?

Complete the sentences below with vocabulary words from the list above. Words may be used more than once.

1. $\mathrm{A}(\mathrm{n})$ $\qquad$ ? is a "slide," $\mathrm{a}(\mathrm{n})$ $\qquad$ ? is a "turn," and a(n) $\qquad$ ? is a "flip."
2. The $x$-coordinate of the point that contains the $\qquad$ ? is always 0 .
3. In the equation $y=m x+b$, the value of $m$ is the $\qquad$ ? , and the value of $b$ is the $\qquad$ ? .

## 5-1 Identifying Linear Functions (pp. 300-306)

## EXAMPLES

Tell whether each function is linear. If so, graph the function.

■ $y=-3 x+2$

$$
\begin{array}{r}
y=-3 x+2 \\
+3 x \\
3 x+y=
\end{array}
$$

Write the equation in standard form. This is a linear function.

Generate ordered pairs.

| $\boldsymbol{x}$ | $\boldsymbol{y}=-3 x+2$ | $(x, y)$ |
| ---: | :--- | :---: |
| -2 | $y=-3(-2)+2=8$ | $(-2,8)$ |
| 0 | $y=-3(0)+2=2$ | $(0,2)$ |
| 2 | $y=-3(2)+2=-4$ | $(2,-4)$ |

Plot the points and connect them with a straight line.

- $y=2 x^{3}$

This is not a linear function because $x$ has an exponent other than 1.

## EXERCISES

Tell whether the given ordered pairs satisfy a linear function. Explain.
4.

| $x$ | $y$ |
| :---: | :---: |
| -3 | 3 |
| -1 | 1 |
| 1 | 1 |
| 3 | 3 |

5. 

| $x$ | $y$ |
| :---: | :---: |
| 0 | -3 |
| 1 | -1 |
| 2 | 1 |
| 3 | 3 |

6. $\{(-2,5),(-1,3),(0,1),(1,-1),(2,-3)\}$
7. $\{(1,7),(3,6),(6,5),(9,4),(13,3)\}$

Each equation below is linear. Write each equation in standard form and give the values of $A, B$, and $C$.
8. $y=-5 x+1$
9. $\frac{x+2}{2}=-3 y$
10. $4 y=7 x$
11. $9=y$
12. Helene is selling cupcakes for $\$ 0.50$ each. The function $f(x)=0.5 x$ gives the total amount of money Helene makes after selling $x$ cupcakes. Graph this function and give its domain and range.

## E X A M P L E

- Find the $x$ - and $y$-intercepts of $2 x+5 y=10$.

Let $y=0$.
Let $x=0$.
$2 x+5(0)=10$
$2(0)+5 y=10$
$2 x+0=10$
$0+5 y=10$
$2 x=10$
$5 y=10$
$\frac{2 x}{2}=\frac{10}{2}$
$x=5$
$\frac{5 y}{5}=\frac{10}{5}$
$y=2$
The $x$-intercept is 5 . The $y$-intercept is 2 .

## EXERCISES

Find the $x$ - and $y$-intercepts.
13.

15. $3 x-y=9$
17. $-x+6 y=18$
14.

16. $-2 x+y=1$
18. $3 x-4 y=1$

## 5-3 Rate of Change and Slope (pp. 314-321)

## EXAMPLE

- Find the slope of the line.

## EXERCISES

19. Graph the data and show the rates of change.

| Time (s) | Distance (ft) |
| :---: | :---: |
| 0 | 0 |
| 1 | 16 |
| 2 | 64 |
| 3 | 144 |
| 4 | 256 |

20. Find the slope of the line graphed below.

## 5-4 The Slope Formula (pp. 324-329)

## EXAMPLE

- Find the slope of the line described by
$2 x-3 y=6$.
Step 1 Find the $x$ - and $y$-intercepts.

$$
\begin{array}{rlrl}
\text { Let } y=0 . & \text { Let } x=0 \\
2 x-3(0)=6 & 2(0)-3 y & =6 \\
2 x=6 & -3 y & =6 \\
x=3 & y & =-2
\end{array}
$$

The line contains $(3,0)$ and $(0,-2)$.
Step 2 Use the slope formula.

$$
m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{-2-0}{0-3}=\frac{-2}{-3}=\frac{2}{3}
$$

## EXERCISES

Find the slope of the line described by each equation.
21. $4 x+3 y=24$
22. $y=-3 x+6$
23. $x+2 y=10$
24. $3 x=y+3$
25. $y+2=7 x$
26. $16 x=4 y+1$

Find the slope of the line that contains each pair of points.
27. $(1,2)$ and $(2,-3)$
28. $(4,-2)$ and $(-5,7)$
29. $(-3,-6)$ and $(4,1)$
30. $\left(\frac{1}{2}, 2\right)$ and $\left(\frac{3}{4}, \frac{5}{2}\right)$
31. $(2,2)$ and $(2,7)$
32. $(1,-3)$ and $(5,-3)$

## 5-5 The Midpoint and Distance Formulas (pp. 330-335)

## EXAMPLE

■ Find the coordinates of the midpoint of $\overline{A B}$ with endpoints $A(-4,3)$ and $B(5,-6)$
$M\left(\frac{x_{1}+x_{2}}{2}, \frac{y_{1}+y_{2}}{2}\right)$
Write the formula.
$M\left(\frac{-4+5}{2}, \frac{3+(-6)}{2}\right)=M\left(\frac{1}{2},-\frac{3}{2}\right)$

- Use the Distance Formula to find the distance, to the nearest hundredth, from $C(-4,1)$ to $D(5,-3)$.
$d=\sqrt{\left(x_{2}-x_{1}\right)^{2}+\left(y_{2}-y_{1}\right)^{2}}$
$d=\sqrt{[5-(-4)]^{2}+(-3-1)^{2}}$
$d=\sqrt{9^{2}+(-4)^{2}}$
Subtract within
$d=\sqrt{97} \approx 9.85$ grouping symbols.
Simplify and estimate.

## EXERCISES

Find the coordinates of the midpoint of each segment.
33. $\overline{E F}$ with endpoints $E(9,12)$ and $F(21,18)$
34. $\overline{G H}$ with endpoints $G(-5,-7)$ and $H(4,-11)$

Use the Distance Formula to find the distance, to the nearest hundredth, between each pair of points.
35. $J(3,10)$ and $K(-2,4)$
36. $L(-6,0)$ and $M(8,-7)$
37. Each unit on a map of a forest represents 1 mile. To the nearest tenth of a mile, what is the distance from a ranger station at $(1,2)$ on the map to a river crossing at $(2,4)$ ?

## 5-6 Direct Variation (pp. 336-341)

## E X A M P L E

- Tell whether $6 x=-4 y$ represents a direct variation. If so, identify the constant of variation.

$$
\begin{aligned}
6 x & =-4 y \\
\frac{6 x}{-4} & =\frac{-4 y}{-4} \quad \text { Solve the equation for } y . \\
-\frac{6}{4} x & =y \\
y & =-\frac{3}{2} x \quad \text { Simplify. }
\end{aligned}
$$

This equation represents a direct variation because it can be written in the form $y=k x$, where $k=-\frac{3}{2}$.

## EXERCISES

Tell whether each equation is a direct variation. If so, identify the constant of variation.
38. $y=-6 x$
39. $x-y=0$
40. $y+4 x=3$
41. $2 x=-4 y$
42. The value of $y$ varies directly with $x$, and $y=-8$ when $x=2$. Find $y$ when $x=3$.
43. Maleka charges $\$ 8$ per hour for baby-sitting. The amount of money she makes varies directly with the number of hours she baby-sits. Write a direct variation equation for the amount $y$ Maleka earns for baby-sitting $x$ hours. Then graph.

## 5-7 Slope-Intercept Form (pp. 344-350)

## E X A M P L E

- Graph the line with slope $=-\frac{4}{5}$ and $y$-intercept $=8$.
Step 1 Plot ( 0,8 ).
Step 2 For a slope of $\frac{-4}{5}$, count 4 down and 5 right from $(0,8)$. Plot another point.

Step 3 Connect the two points with a line.

## EXERCISES

Graph each line given the slope and $y$-intercept.
44. slope $=-\frac{1}{2} ; y$-intercept $=4$
45. slope $=3 ; y$-intercept $=-7$

Write the equation that describes each line in slopeintercept form.
46. slope $=\frac{1}{3}, y$-intercept $=5$
47. slope $=4,(1,-5)$ is on the line.

## 5-8 Point-Slope Form (pp. 351-358)

## EXAMPLE

- Write an equation in slope-intercept form for the line through $(4,-1)$ and $(-2,8)$.

Step 1 Find the slope.
$m=\frac{y_{2}-y_{1}}{x_{2}-x_{1}}=\frac{8-(-1)}{-2-4}=\frac{9}{-6}=-\frac{3}{2}$
Step 2 Write the point-slope form.

$$
\begin{aligned}
& y-8=-\frac{3}{2}[x-(-2)] \\
& y-8=-\frac{3}{2}(x+2)
\end{aligned}
$$

Step 3 Write the slope-intercept form.

$$
y=-\frac{3}{2} x+5
$$

Solve for $y$.

## EXERCISES

Graph the line described by each equation.
48. $y+3=\frac{1}{2}(x-4)$
49. $y-1=-(x+3)$

Write the equation that describes each line in slopeintercept form.
50. slope $=2,(1,3)$ is on the line.
51. slope $=-5,(-6,4)$ is on the line.
52. $(1,4)$ and $(3,8)$ are on the line.
53. $(-2,4)$ and $(-1,6)$ are on the line.

## 5-9 Slopes of Parallel and Perpendicular Lines (pp. 361-367)

## EXAMPLE

- Write an equation in slope-intercept form for the line that passes through $(4,-2)$ and is perpendicular to the line described by $y=-4 x+3$.
The slope of $y=-4 x+3$ is -4 .
The perpendicular line has a slope of $\frac{1}{4}$ and contains ( $4,-2$ ).

$$
\begin{array}{rr}
y+2 & =\frac{1}{4}(x-4) \quad \begin{aligned}
\text { Substitute } \\
\text { point-slo }
\end{aligned} \\
y & =\frac{1}{4} x-3 \quad \text { Solve for } y .
\end{array}
$$

## EXERCISES

Identify which lines are parallel.
54. $y=-\frac{1}{3} x ; y=3 x+2 ; y=-\frac{1}{3} x-6 ; y=3$
55. $y-2=-4(x-1) ; y=4 x-4 ; y=\frac{1}{4} x ; y=-4 x-2$

Identify which lines are perpendicular.
56. $y-1=-5(x-6) ; y=\frac{1}{5} x+2 ; y=5 ; y=5 x+8$
57. $y=2 x ; y-2=3(x+1) ; y=\frac{2}{3} x-4 ; y=-\frac{1}{3} x$
58. Write an equation in slope-intercept form for the line that passes through $(1,-1)$ and is parallel to the line described by $y=2 x-4$.

## 5-10 Transforming Linear Functions (pp. 369-375)

## EXAMPLE

- Graph $f(x)=\frac{1}{2} x$ and $g(x)=4 x+2$. Then describe the transformation(s) from the graph of $f(x)$ to the graph of $g(x)$.
- Multiply $f(x)=\frac{1}{2} x$ by 8 to get $h(x)=4 x$. This rotates the graph about ( 0,0 ), making it steeper.
- Then add 2 to $h(x)=4 x$ to get $g(x)=4 x+2$. This translates the

## EXERCISES

Graph $f(x)$ and $g(x)$. Then describe the transformation(s) from the graph of $f(x)$ to the graph of $g(x)$.
59. $f(x)=x, g(x)=x+4$
60. $f(x)=4 x, g(x)=-4 x$
61. $f(x)=\frac{1}{3} x-2, g(x)=-\frac{1}{3} x-2$
62. The entrance fee at a carnival is $\$ 3$ and each ride costs $\$ 1$. The total cost for $x$ rides is $f(x)=x+3$. How will the graph of this function change if the entrance fee is increased to $\$ 5$ ? if the cost per ride is increased to $\$ 2$ ?

Tell whether each function is linear. If so, graph the function.

1. $3 y=2 x+3$
2. $y=x(4+x)$
3. Lily plans to volunteer at the tutoring center for 45 hours. She can tutor 3 hours per week. The function $f(x)=45-3 x$ gives the number of hours she will have left to tutor after $x$ weeks. Graph the function and find its intercepts. What does each intercept represent?
4. The table shows the number of guppies in an aquarium over time. Graph the data and show the rates of change.

| Time (mo) | 0 | 1 | 2 | 5 | 8 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Guppies | 4 | 4 | 10 | 25 | 31 |

Find the slope of each line. Then tell what the slope represents.
5.

| Ticket Costs |  |
| :---: | :---: |
|  |  |

6. 

7.

8. Each unit on a map of a bay represents 1 kilometer. Two buoys are located at $(1,5)$ and $(3,6)$ on the map. To the nearest tenth of a kilometer, what is the distance between the two buoys?
9. In orbit around Earth, a space shuttle travels at a speed of about 5 miles per second.

Write a direct variation equation for the distance $y$ the space shuttle will travel in $x$ seconds. Then graph.
10. Write the equation $2 x-2 y=4$ in slope-intercept form. Then graph the line described by the equation.

Write the equation that describes each line in slope-intercept form.
11. slope $=-2, y$-intercept $=7$
12. slope $=4,(-3,3)$ is on the line.
13. $(1,5)$ and $(-2,8)$ are on the line.
14. $x$-intercept $=3, y$-intercept $=-3$

Write an equation in point-slope form for the line with the given slope that contains the given point.
15. slope $=-1 ;(1,3)$
16. slope $=5$; $(-3,2)$
17. Write an equation in slope-intercept form for the line that passes through $(0,6)$ and is parallel to the line described by $y=2 x+3$.

Graph $f(x)$ and $g(x)$. Then describe the transformation(s) from the graph of $f(x)$ to the graph of $\boldsymbol{g}(\boldsymbol{x})$.
18. $f(x)=8 x, g(x)=4 x$
19. $f(x)=-x+2, g(x)=-x-1$
20. $f(x)=3 x, g(x)=6 x-1$

## FOCUS ON SAT

SAT scores are based on the total number of items answered correctly minus a fraction of the number of multiple-choice questions answered incorrectly. No points are subtracted for questions unanswered.

On the SAT, there is a penalty for incorrect answers on multiple-choice items. Guess only when you can eliminate at least one of the answer choices.

You may want to time yourself as you take this practice test. It should take you about 7 minutes to complete.

1. The line through $A(1,-3)$ and $B(-2, d)$ has slope -2 . What is the value of $d$ ?
(A) $-\frac{3}{2}$
(B) -1
(C) $\frac{1}{2}$
(D) 3
(E) 5
2. The ordered pairs $\{(0,-3),(4,-1),(6,0)$, $(10,2)\}$ satisfy a pattern. Which is NOT true?
(A) The pattern is linear.
(B) The pattern can be described by $2 x-4 y=12$.
(C) The ordered pairs lie on a line.
(D) $(-4,1)$ satisfies the same pattern.
(E) The set of ordered pairs is a function.
3. If $y$ varies directly as $x$, what is the value of $x$ when $y=72$ ?

| $\boldsymbol{x}$ | 7 | 12 |  |
| :---: | :---: | :---: | :---: |
| $\boldsymbol{y}$ | 28 | 48 | 72 |

(A) 17
(B) 18
(C) 24
(D) 28
(E) 36
4. The line segment between the points $(4,0)$ and $(2,-2)$ forms one side of a rectangle. Which of the following coordinates could determine another vertex of that rectangle?

(A) $(-2,6)$
(B) $(-2,-2)$
(C) $(0,6)$
(D) $(1,2)$
(E) $(4,6)$
5. Which of the following has the same slope as the line described by $2 x-3 y=3$ ?
(A) $3 x-2 y=2$
(B) $\frac{2}{3} x-y=-2$
(C) $2 x-2 y=3$
(D) $\frac{1}{3} x-2 y=-2$
(E) $-2 x-3 y=2$

## Multiple Choice: Recognize Distracters

In multiple-choice items, the options that are incorrect are called distracters. This is an appropriate name, because these incorrect options can distract you from the correct answer.

Test writers create distracters by using common student errors. Beware! Even if the answer you get when you work the problem is one of the options, it may not be the correct answer.

## EXAMPLE 1

What is the $y$-intercept of $4 x+10=-2 y$ ?
(A) 10
(C) -2.5
(B) 5
(D) -5

Look at each option carefully.
(A) This is a distracter. The $y$-intercept would be 10 if the function was $4 x+10=y$. A common error is to ignore the coefficient of $y$.
(B) This is a distracter. Another common error is to divide by 2 instead of -2 when solving for $y$.
(C) This is a distracter. One of the most common errors students make is confusing the $x$-intercept and the $y$-intercept. This distracter is actually the $x$-intercept of the given line.
(D) This is the correct answer.

## EXAMPLE 2

What is the equation of a line with a slope of -4 that contains $(2,-3)$ ?
(F) $y-3=-4(x-2)$ (H) $y+3=-4(x-2)$
(G) $y-2=-4(x+3)$ (J) $y+4=-3(x-2)$

Look at each option carefully.
(F) This is a distracter. Students often make errors with positive and negative signs. You would get this answer if you simplified $y-(-3)$ as $y-3$.
(G) This is a distracter. You would get this answer if you switched the $x$-coordinate and the $y$-coordinate.
(H) This is the correct answer.
(J) This is a distracter. You would get this answer if you substituted the given values incorrectly in the point-slope equation.

When you calculate an answer to a multiplechoice test item, try to solve the problem again with a different method to make sure your answer is correct.

Read each test item and answer the questions that follow.

## Item A

A line contains $(1,2)$ and $(-2,14)$. What are the slope and $y$-intercept?
(A) Slope $=-4 ; y$-intercept $=-2$
(B) Slope $=4 ; y$-intercept $=6$
(C) Slope $=-\frac{1}{4}$; $y$-intercept $=1$
(D) Slope $=-4 ; y$-intercept $=6$

1. What common error does the slope in choice B represent?
2. The slope given in choice $A$ is correct, but the $y$-intercept is not. What error was made when finding the $y$-intercept?
3. What formula can you use to find the slope of a line? How was this formula used incorrectly to get the slope in choice C?

## Item B

Which of these functions has a graph that is NOT parallel to the line described by $y=\frac{1}{2} x+4$ ?
(F) $y=6-\frac{1}{2} x$
(G) $y=\frac{1}{2} x+6$
(H) $-2 y=-x+1$
(J) $2 y=x$
4. When given two linear functions, describe how to determine whether their graphs are parallel.
5. Which is the correct answer? Describe the errors a student might make to get each of the distracters.

## Item C

Which of these lines has a slope of -3 ?
(A)

(C)

(B)

(D)

6. Which two answer choices can be eliminated immediately? Why?
7. Decribe how to find the slope of a line from its graph.
8. What common error does choice A represent?
9. What common error does choice $D$ represent?
10. Which is the correct answer?

## Item D

Which is NOT a linear function?
(F) $f(x)=4+x$
(G) $f(x)=-x-4$
(H) $f(x)=4 x^{2}$
(J) $f(x)=\frac{1}{4} x$
11. When given a function rule, how can you tell if the function is linear?
12. What part of the function given in choice $G$ might make someone think it is not linear?
13. What part of the function given in choice J might make someone think it is not linear?
14. What part of the function given in choice H makes it NOT linear?

## CUMULATIVE ASSESSMENT, CHAPTERS 1-5

## Multiple Choice

1. What is the value of $2-[1-(2-1)]$ ?
(A) -2
(B) 0
(C) 2
(D) 4
2. Frank borrowed $\$ 5000$ with an annual simple interest rate. The amount of interest he owed after 6 months was $\$ 300$. What is the interest rate of the loan?
(F) $1 \%$
(G) $6 \%$
(H) $10 \%$
(J) $12 \%$
3. Patty's Pizza charges $\$ 5.50$ for a large pizza plus $\$ 0.30$ for each topping. Pizza Town charges $\$ 5.00$ for a large pizza plus $\$ 0.40$ for each topping. Which inequality can you use to find the number of toppings $x$ so that the cost of a pizza at Pizza Town is greater than the cost of a pizza at Patty's Pizza?
(A) $(5+0.4) x>(5.5+0.3) x$
(B) $5.5 x+0.3>5 x+0.4$
(C) $5.5+0.3 x>5+0.4 x$
(D) $5+0.4 x>5.5+0.3 x$
4. The side length of a square $s$ can be determined by the formula $s=\sqrt{A}$ where $A$ represents the area of the square. What is the side length of a square with area 0.09 square meter?
(F) 0.0081 meters
(G) 0.81 meters
(H) 0.03 meters
(J) 0.3 meters
5. What is the value of $f(x)=-3-x$ when $x=-7$ ?
(A) -10
(B) -4
(C) 4
(D) 10
6. Which relationship is a direct variation?
(F)

| $x$ | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | -1 | 0 | 1 | 2 |

(G)

| $x$ | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | 0 | -1 | -2 | -3 |

(H)

| $x$ | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | 3 | 5 | 7 | 9 |

(J)

| $x$ | 1 | 2 | 3 | 4 |
| :---: | :---: | :---: | :---: | :---: |
| $y$ | 3 | 6 | 9 | 12 |

7. Which function has $x$-intercept -2 and $y$-intercept 4 ?
(A) $2 x-y=4$
(B) $2 y-x=4$
(C) $y-2 x=4$
(D) $x-2 y=4$
8. Which equation describes the relationship between $x$ and $y$ in the table below?

| $x$ | -8 | -4 | 0 | 4 | 8 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\boldsymbol{y}$ | 2 | 1 | 0 | -1 | -2 |

(F) $y=-4 x$
(H) $y=4 x$
(G) $y=-\frac{1}{4} x$
(J) $y=\frac{1}{4} x$
9. Which graph is described by $x-3 y=-3$ ?
(A)

(c)

(B)

(D)

When answering multiple-choice test items, check that the test item number matches the number on your answer sheet, especially if you skip test items that you plan to come back to.
10. Which steps could you use to graph the line that has slope 2 and contains the point $(-1,3)$ ?
(F) Plot $(-1,3)$. Move 1 unit up and 2 units right and plot another point.
(G) Plot $(-1,3)$. Move 2 units up and 1 unit right and plot another point.
(H) Plot $(-1,3)$. Move 1 unit up and 2 units left and plot another point.
(J) Plot $(-1,3)$. Move 2 units up and 1 unit left and plot another point.
11. Which line is parallel to the line described by $2 x+3 y=6$ ?
(A) $3 x+2 y=6$
(C) $2 x+3 y=-6$
(B) $3 x-2 y=-6$
(D) $2 x-3 y=6$
12. Which function's graph is NOT perpendicular to the line described by $4 x-y=-2$ ?
(F) $y+\frac{1}{4} x=0$
(H) $3 y=\frac{3}{4} x+3$
(G) $\frac{1}{2} x=10-2 y$
(J) $y=-\frac{1}{4} x+\frac{3}{2}$
13. Company A charges $\$ 30$ plus $\$ 0.40$ per mile for a car rental. The total charge for $m$ miles is given by $f(m)=30+0.4 m$. For a similar car, company $B$ charges $\$ 30$ plus $\$ 0.30$ per mile. The total charge for $m$ miles is given by $g(m)=30+0.3 m$. Which best describes the transformation from the graph of $f(m)$ to the graph of $g(m)$ ?
(A) Translation up
(B) Translation down
(C) Rotation
(D) Reflection

## Gridded Response

14. What is the value of $x$ in the diagram below?

$$
\triangle A B C \sim \triangle D E F
$$

15. What is the 46 th term in the arithmetic sequence $-1.5,-1.3,-1.1,-0.9, \ldots$ ?
16. What is the $y$-intercept of $y-2=3(x+4)$ ?

## Short Response

17. A video store charges a $\$ 10$ membership fee plus $\$ 2$ for each movie rental. The total cost for $x$ movie rentals is given by $f(x)=2 x+10$.
a. Graph this function.
b. Give a reasonable domain and range.
18. The table below shows the federal minimum wage in different years.

| Year | 1960 | 1970 | 1980 | 1990 | 2000 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Minimum Wage (\$) | 1.00 | 1.60 | 3.10 | 3.80 | 5.15 |

a. Find the rate of change for each ten-year time period. Show your work.
b. During which time period did the minimum wage increase the fastest? Explain what the rate of change for this time period means.
19. a. Find the slope of the line below.

b. Write an equation in slope-intercept form for a line that is perpendicular to the line in part a and has the same $y$-intercept as the function in part a. Show your work and explain how you found your answer.

## Extended Response

20. The relationship between the wind speed at a given temperature and the apparent temperature is approximately linear. The table shows the apparent temperature at various wind speeds when the actual temperature is $t^{\circ} \mathrm{F}$.

| Wind Speed (mi/h) | 5 | 10 | 15 |
| :---: | :---: | :---: | :---: |
| Apparent Temperature ( ${ }^{\circ}$ ) | 36 | 34 | 32 |

a. Write an equation in slope-intercept form that describes the data in the table. Explain how you found your answer.
b. What does the slope mean in this situation?
c. What is the actual temperature $t$ ? Explain.
d. Determine the apparent temperature when the wind speed is 12 miles per hour. Show your work.
